Introduction

Mohamed Abuella
https://mohamedabuella.github.io https://www.linkedin.com/in/mohamed-abuella/

About Me..
An electrical engineer by training, traditionally is interested in Mathematical and Computational Analysis, Modeling and Optimization, and who is recently passionate in Artificial Intelligence and Data-driven Analytics.

A researcher works to modernize the electric grid and optimize its integration of distributed energy resources by applying descriptive, predictive and prescriptive analytics.

An adaptative to work in a diverse environment for an interdisciplinary research.

Introduction

To sum it up in a broad sense, let's imagine that.. If my professional development was a book, its title would be **“Electric Power Systems Operation and Planning”**

Thus, the chapters of this book would be as follows:

Ch.1 Fundamentals of Electrical Engineering. This chapter covers Instrumentation & Control, Basics of Power Electronics such as Diodes & Thyristors as rectifiers, (maneuvered by applying Laws of Physics). With getting hands-on electrical installation & wiring and maintenance of electrical control equipment at pumping stations.

Ch.2 Power Systems Analysis. It includes Power Flow and Faults Calculations, (applying Numerical Analysis methods, such as Newton methods, Differential eqs & Integrals, etc). Get hands-on some simulations of power systems and programmable logic controllers (PLC).

Ch.3 Optimal Power Flow (OPF) and Security-Constrained Economic Dispatch (SCED). It is considering renewables as well, specifically for wind energy resources at the transmission level, (applying Optimization techniques). Get hands-on more of modeling and analysis of power systems.

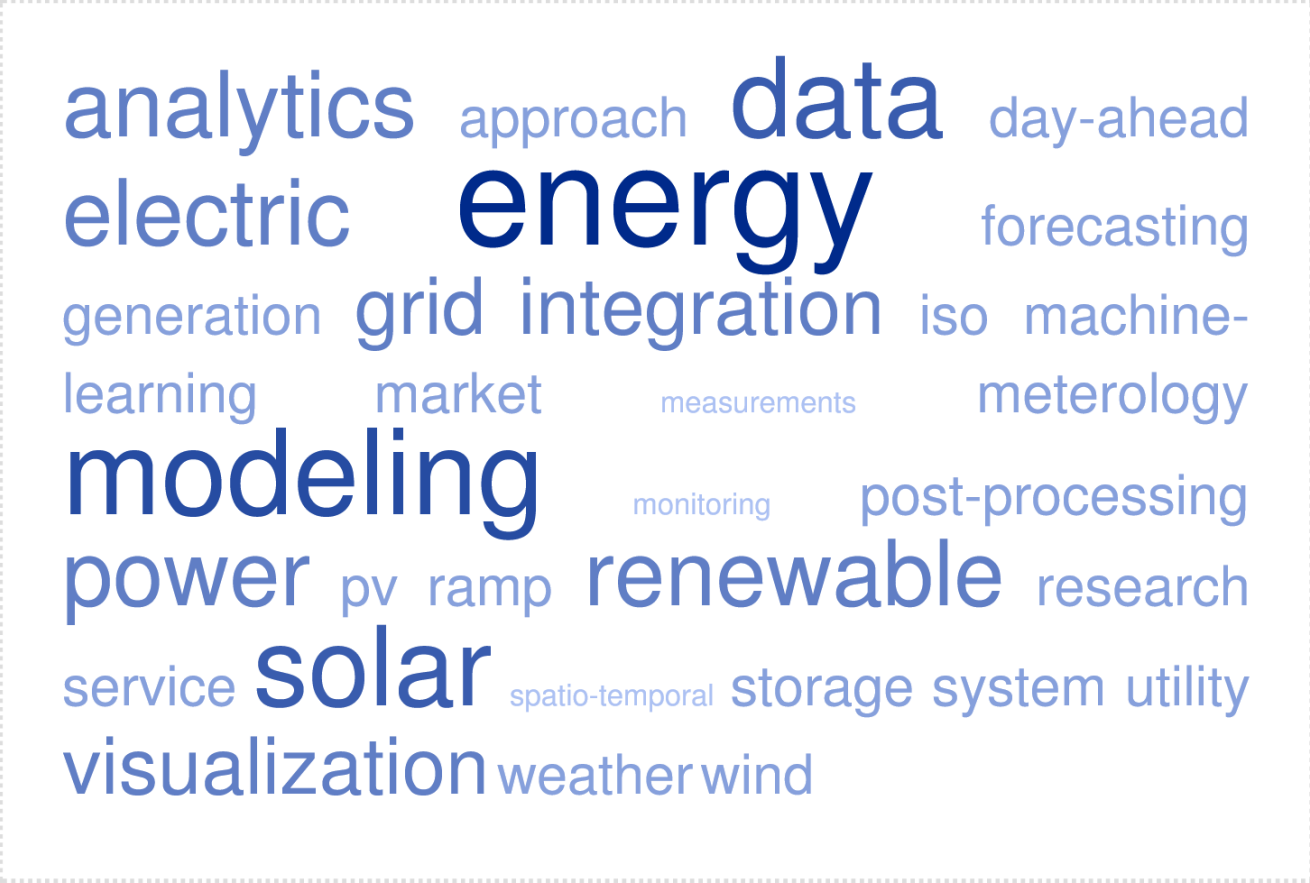
Ch.4 Optimize the Integration of Renewables into the Grid. Solar Power Modeling and Forecasting, (applying Descriptive, Predictive and Prescriptive Analytics, AI and ML techniques). Get hands-on data-driven analytics and become more familiar with conducting & publishing research.

Ch.5 Postdoctoral Researcher at the Center for Applied Intelligent Systems Research (CAISR) at Halmstad University, (applying AI and ML techniques). Dig into research questions trying to get answers and insights for them by using data.

Ch.6 Who knows!

Introduction

In a nutshell, what I am often doing is finding the optimal & root values and curve fitting of nonlinear equations.
..But usually it is not as simple as that!
For more details, you may have a look at pdf copies of my CV and Cloud of Key Skills & Interests.



Motivation

- Professional Advancement
  - ✓ Get an opportunity to collaborate and work with the experts of the field.
  - ✓ To transfer, improve, and acquire knowledge and skills.

- Personal Advancement
  - ✓ Better alignment with personal values and interests.
  - ✓ Better self-esteem.
  - ✓ Better financial security.

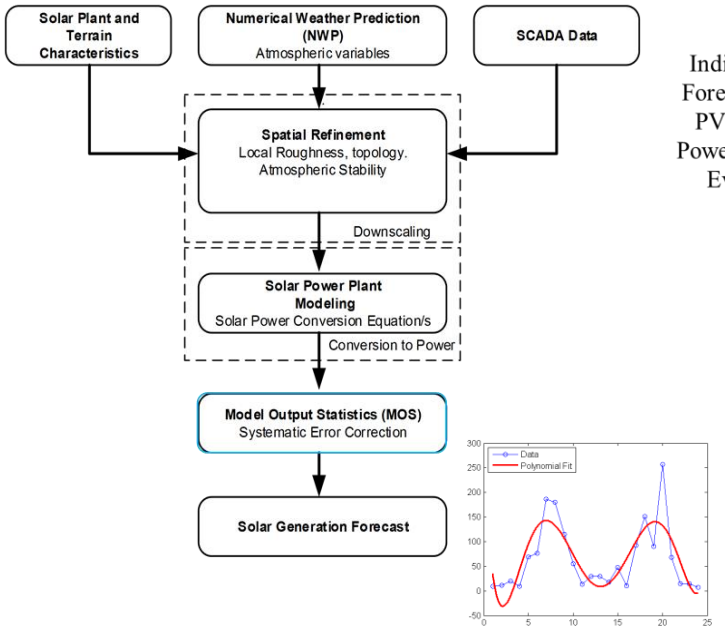
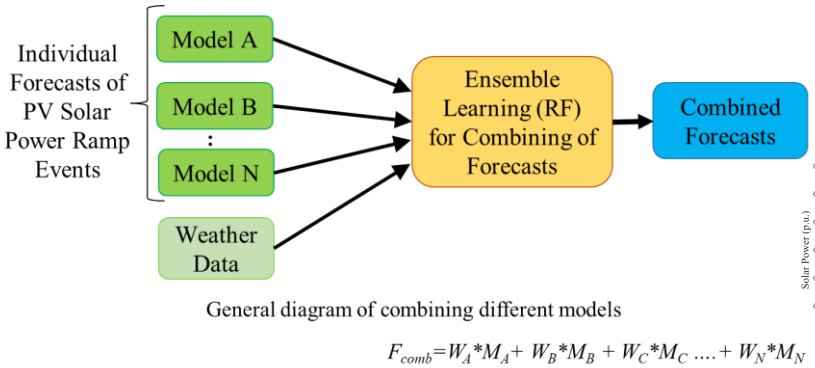
A Post-Processing Approach for Solar Power Combined Forecasts of Ramp Events
https://www.proquest.com/openview/42049145119c7760f93ea736b37a0930/1.pdf?pq-origsite=gscholar&cbl=18750
PhD Thesis, 2018 at University of North Carolina at Charlotte, USA
Advisor: Badrul Chowdhury

UNC CHARLOTTE

Acquired Expertise: Energy Analytics, Energy Markets, Renewable Energy Integration, Asset & Supply Chain, Time Series Analysis & Modeling, Risk & Uncertainty Quantification, Machine Learning, Big-Data Processing, Research Publishing & Peer Reviewing, Software Tools including SAS, R, and Python



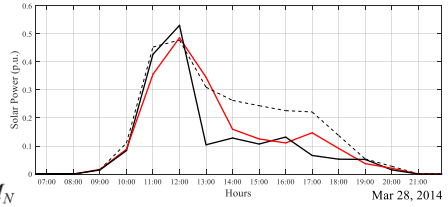


General diagram of combining different models

$$F_{comb}=W_A*M_A+ W_B*M_B + W_C*M_C \ldots.+ W_N*M_N$$

Method of Combining The Models

Random forest (RF) is chosen to be the ***ensemble learning*** method for combining the various models' outcomes.



Research

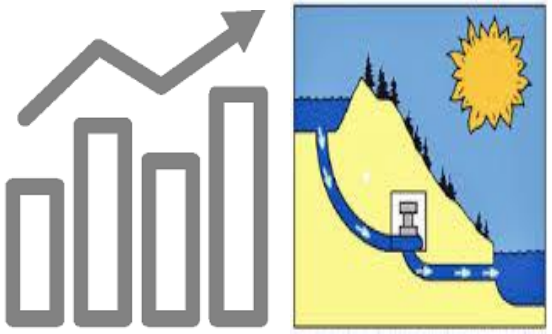
Why Forecast?

$$P_{Supply} = P_{Demand} + P_{Loss}$$

PV Solar Power Generations are Too Variable

Coordination with Operating Reserves and Energy Storage Systems

Reducing Cost and Pollution



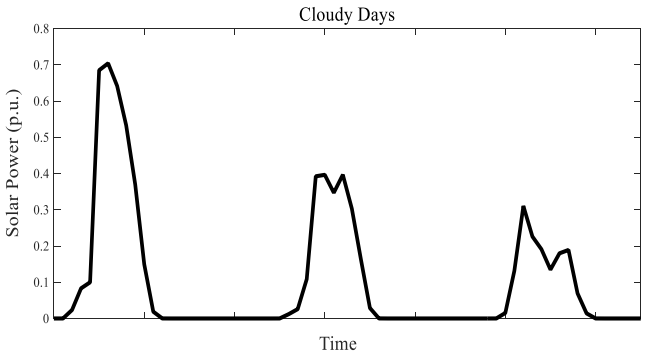


Illustration of the motivation of PV solar power forecasts

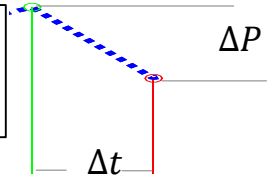
Research

Definition of Ramp Events

Solar power ramp rate (RR) is *the change of solar power during a certain time interval*.

$$Ramp\ Rate, RR(t) = \frac{dP(t)}{dt} = \frac{P(t+D) - P(t)}{D}$$



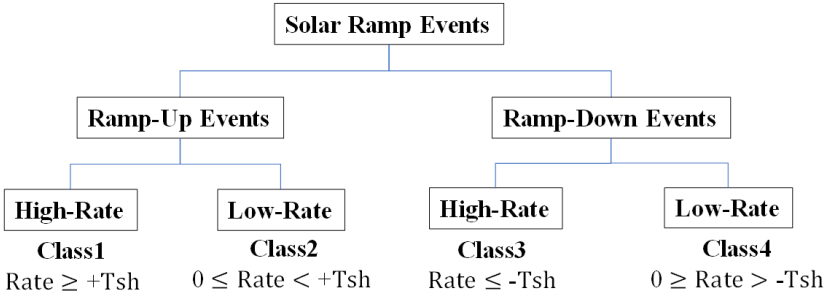
where P(t) is the solar power of the target hour, it can also be its forecast F(t); D is the time duration for which the ramp rate is determined.

For the illustrated cloudy day below:

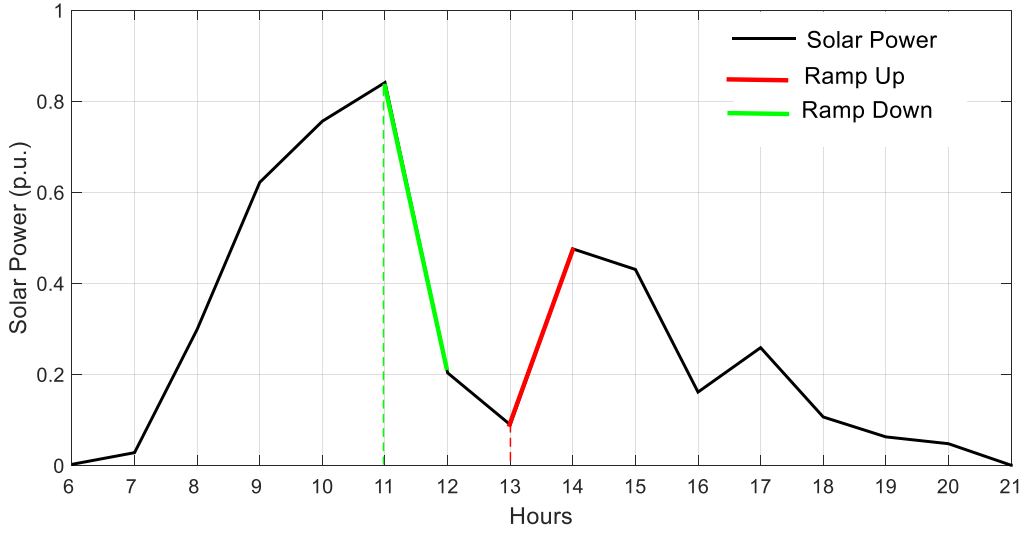
Ramp rate, $\frac{\Delta P}{\Delta t} = \frac{0.2-0.85}{12:00-11:00} = -0.65\ (-65\%)\ ramp\ down\ of\ its\ normal\ capacity,\ (pu/hr)$

Ramp rate, $\frac{\Delta P}{\Delta t} = \frac{0.48-0.1}{14:00-13:00} = +0.38\ (+38\%)\ ramp\ up\ of\ its\ normal\ capacity,\ (pu/hr)$

Some ramps are with low rates, while others with high rates.



Distribution of the classes of solar power ramp events



Ramp Events During a Cloudy Day

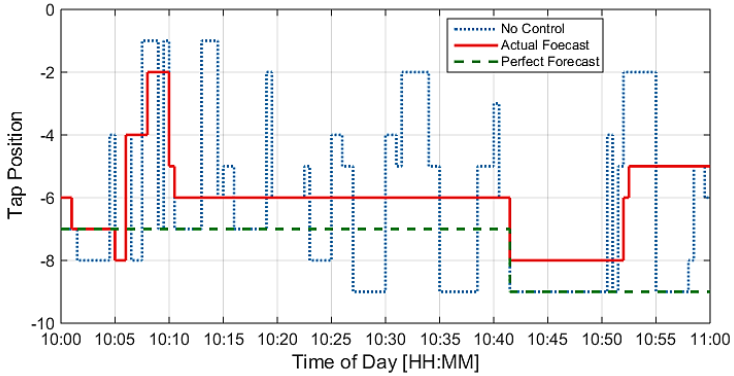
Research

Potential Applications

There are several applications of power systems that rely on solar power ramp event forecasts

Distribution level:

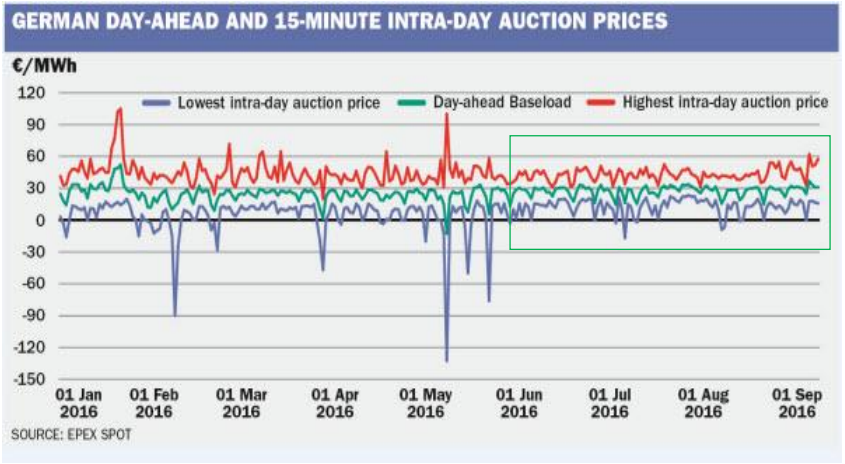
- Optimizing the voltage regulation equipment.
- Control schemes of energy storage systems.



Optimizing the Transformer's Tap Changer position sequences using the solar forecast

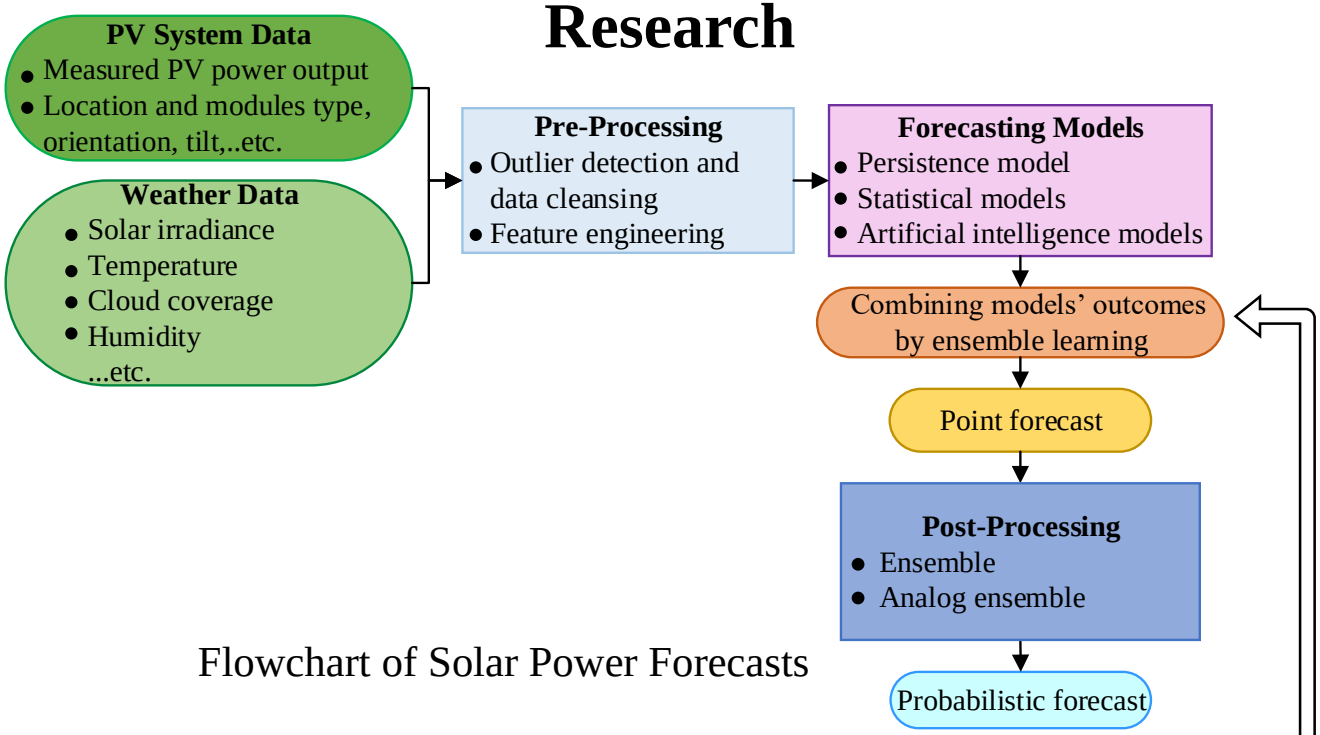
Transmission / bulk level:

- Trading & dispatching the operating reserve.
- Managing the ramp capability / system flexibility with high-level of renewable energy integration.

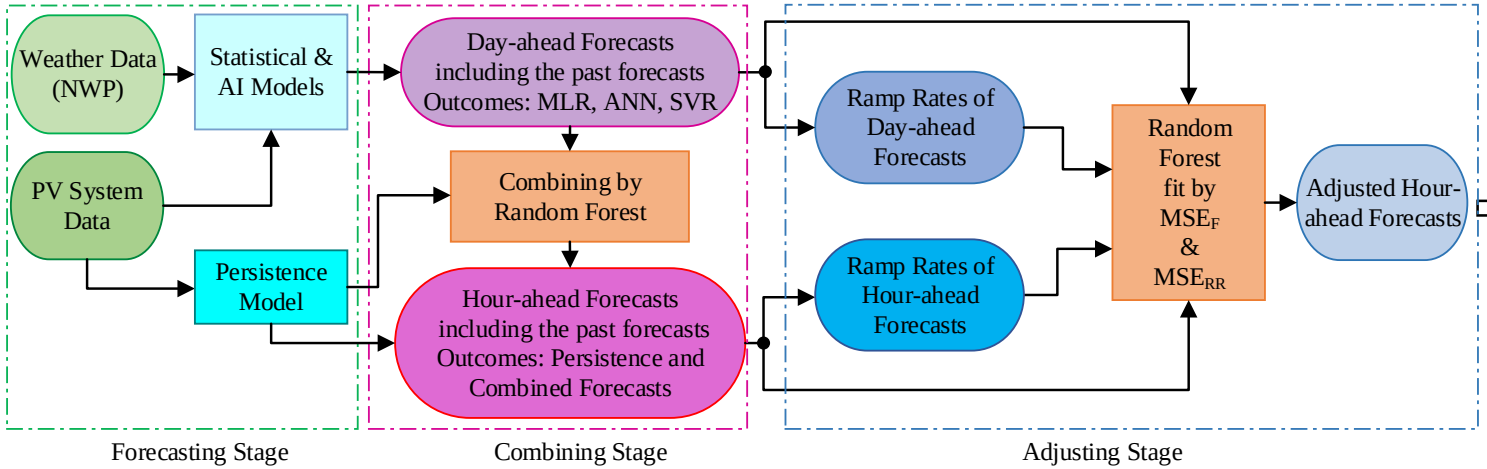


EPEX: European power exchange spot trading

Research

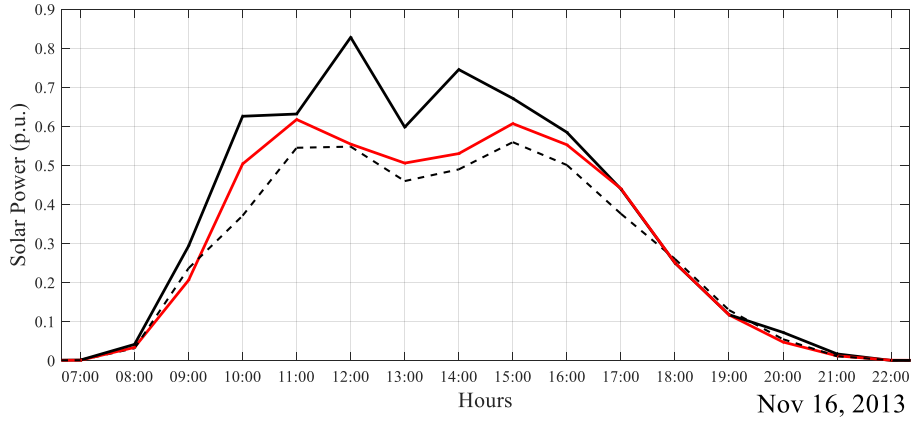


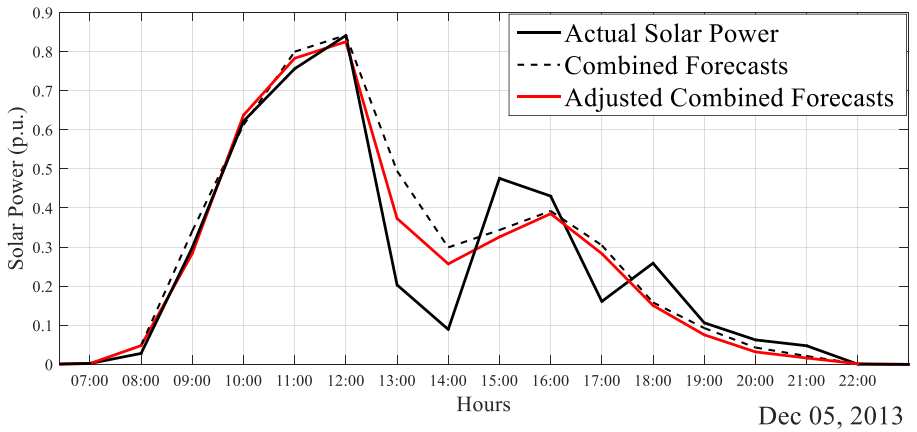
Flowchart of Solar Power Forecasts

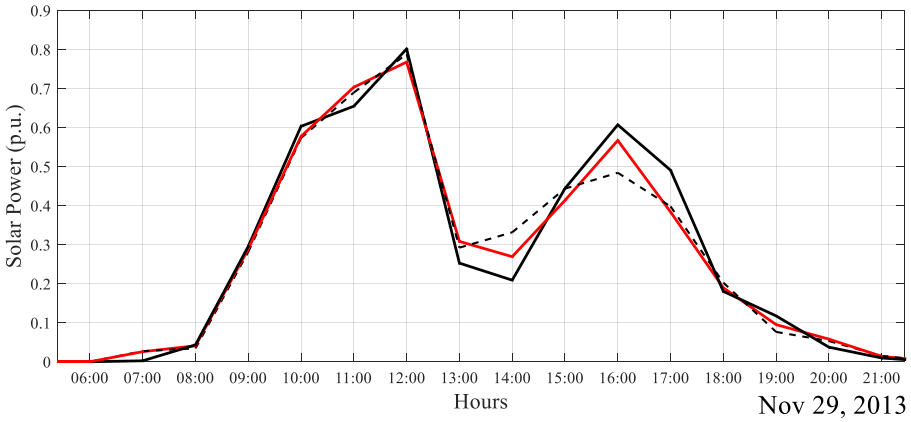


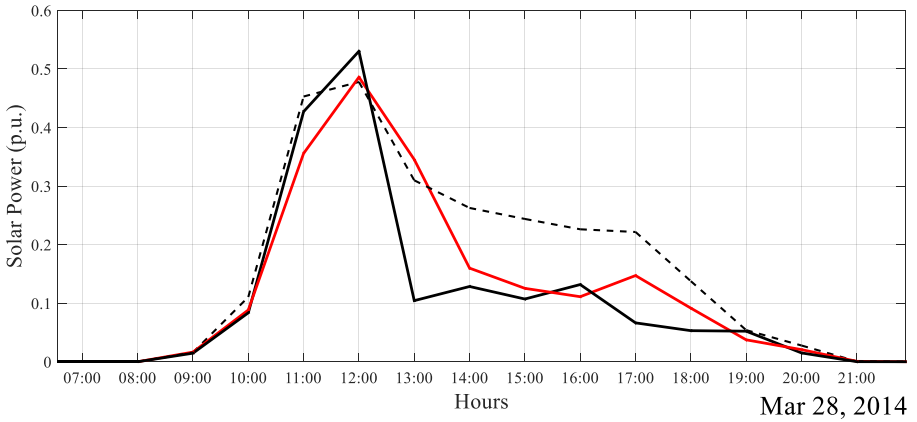
Block diagram of the adjusting approach

Research



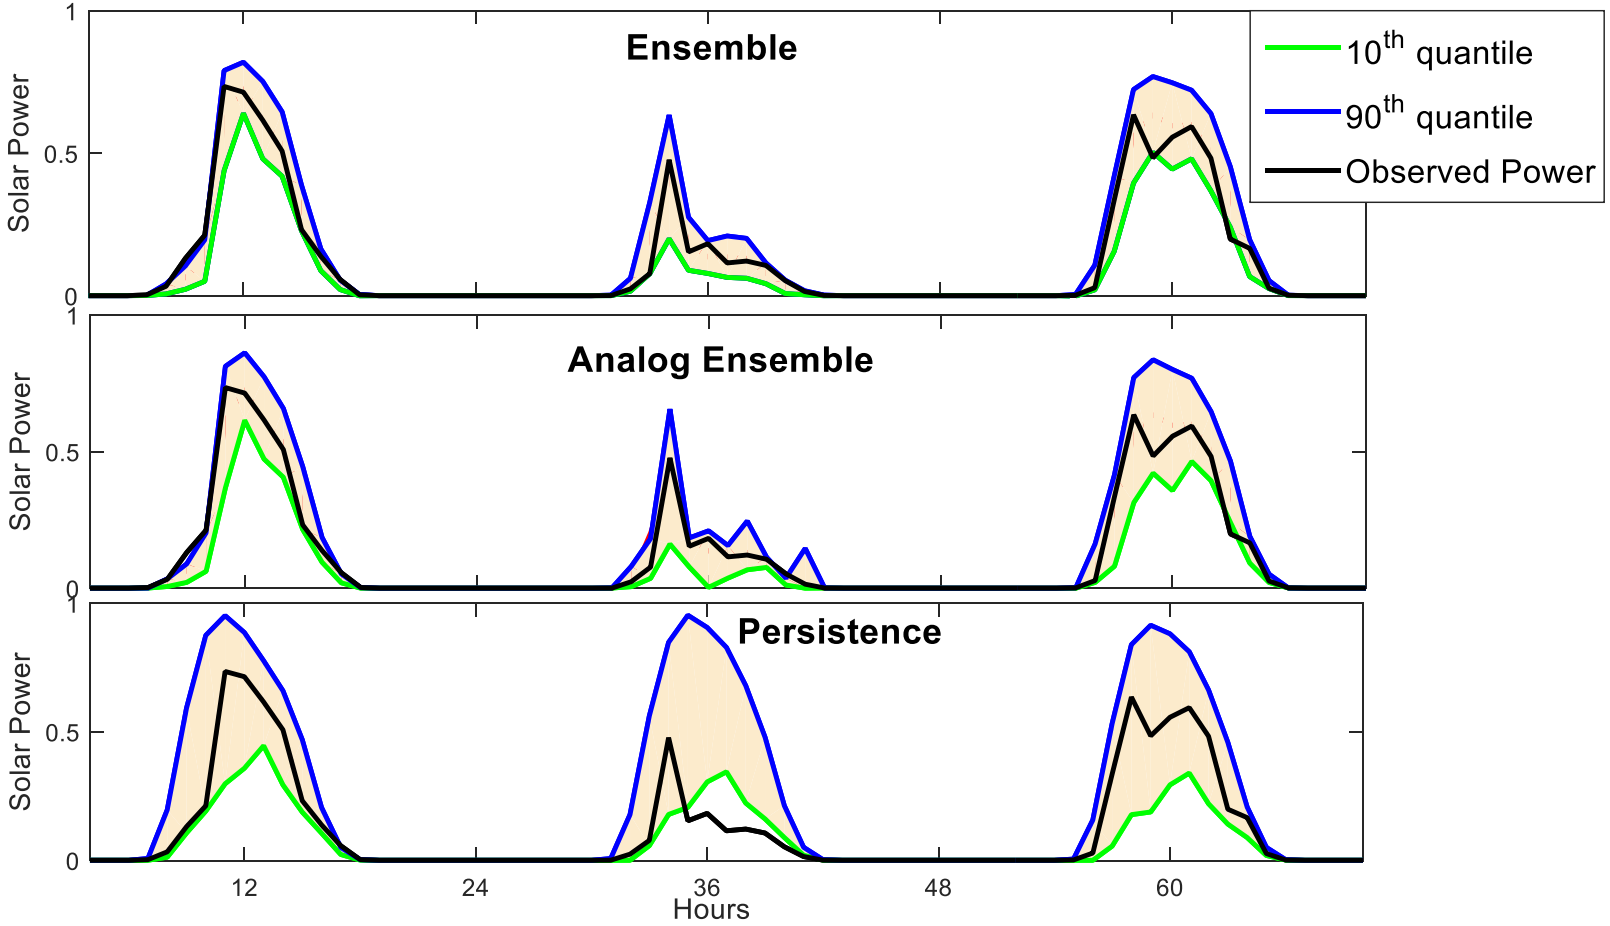






Combined forecasts of solar power for cloudy days before and after applying the adjusting

Research



Graphs of the probabilistic forecasts of the three methods for three days

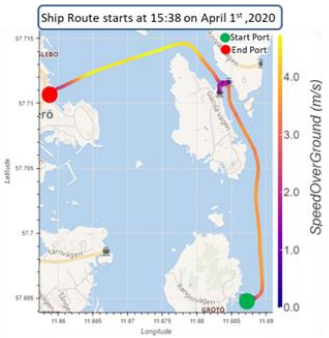
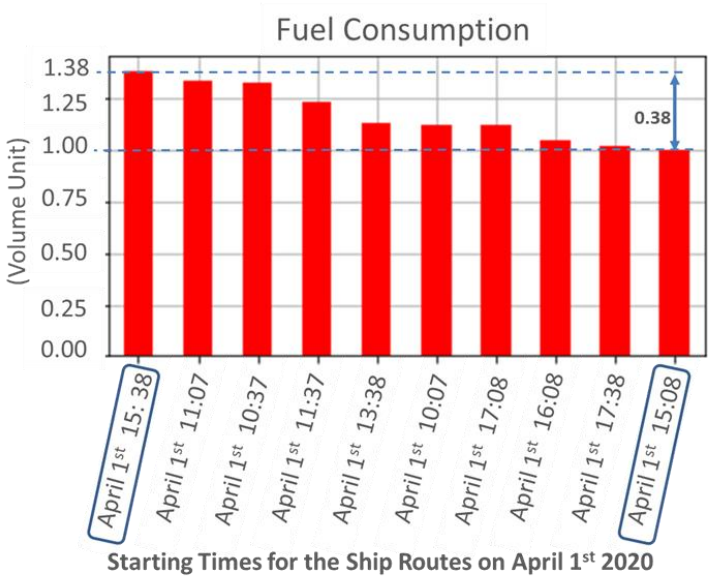
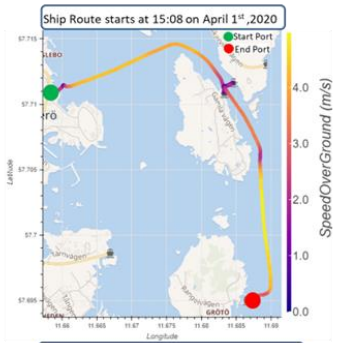
$$Skill\ Score\ (\%) = \left(1 - \frac{Metric_{method}}{Metric_{reference}}\right) * 100$$

Research

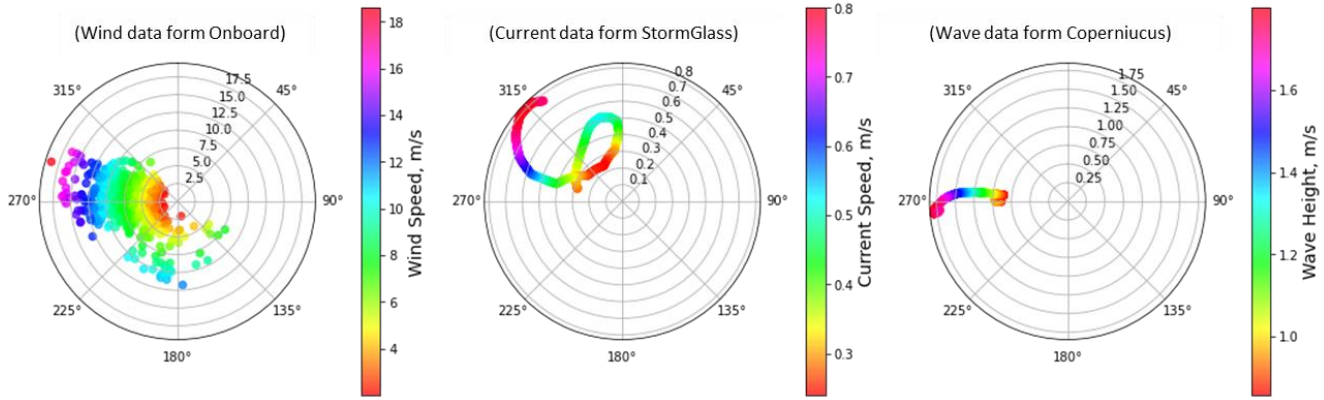
Research Work for Improving the Vessel's Energy Efficiency







Wind, Current, and Wave, 1min-Avg, April 1st 2020



Research

Data Analytics for Improving the Vessel's Energy Efficiency

Descriptive Modeling

Input: Data of vessel's operational and environmental data, from onboard and external sources.

Outcome: Dataset for training and validation the predictive and prescriptive models.

Predictive Modeling

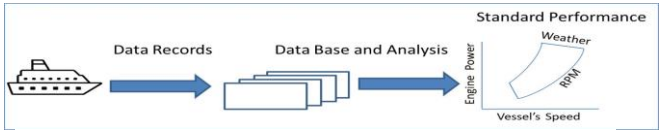
Input: Preprocessed data include operating and weather variables, such as vessel's speed and course, wind, wave, current, etc.

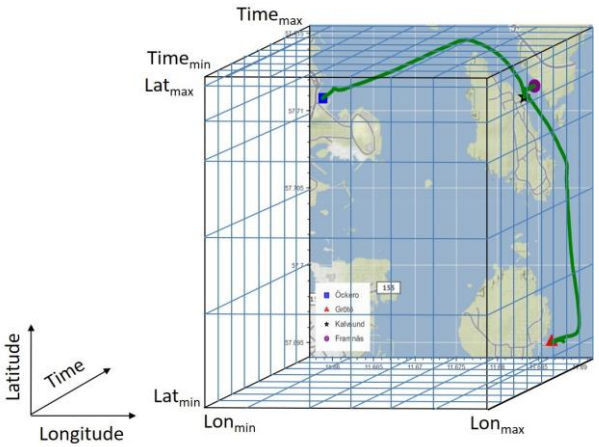
Outcome: Validated predictive models for fuel, distance and time.

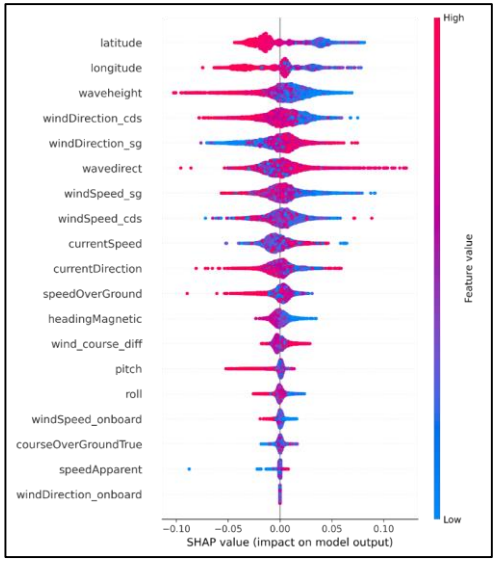
Prescriptive Modeling

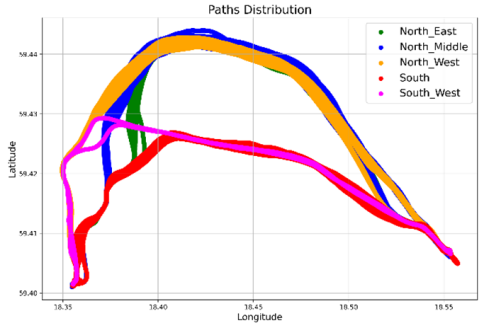
Input: Using solving algorithms, with control variables, such as vessel's speed and course, to find the optimal fuel and time.

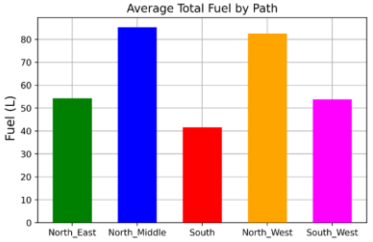
Outcome: Improving fuel consumption and meeting the operational conditions

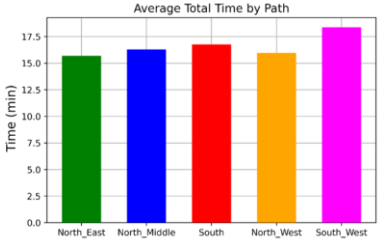






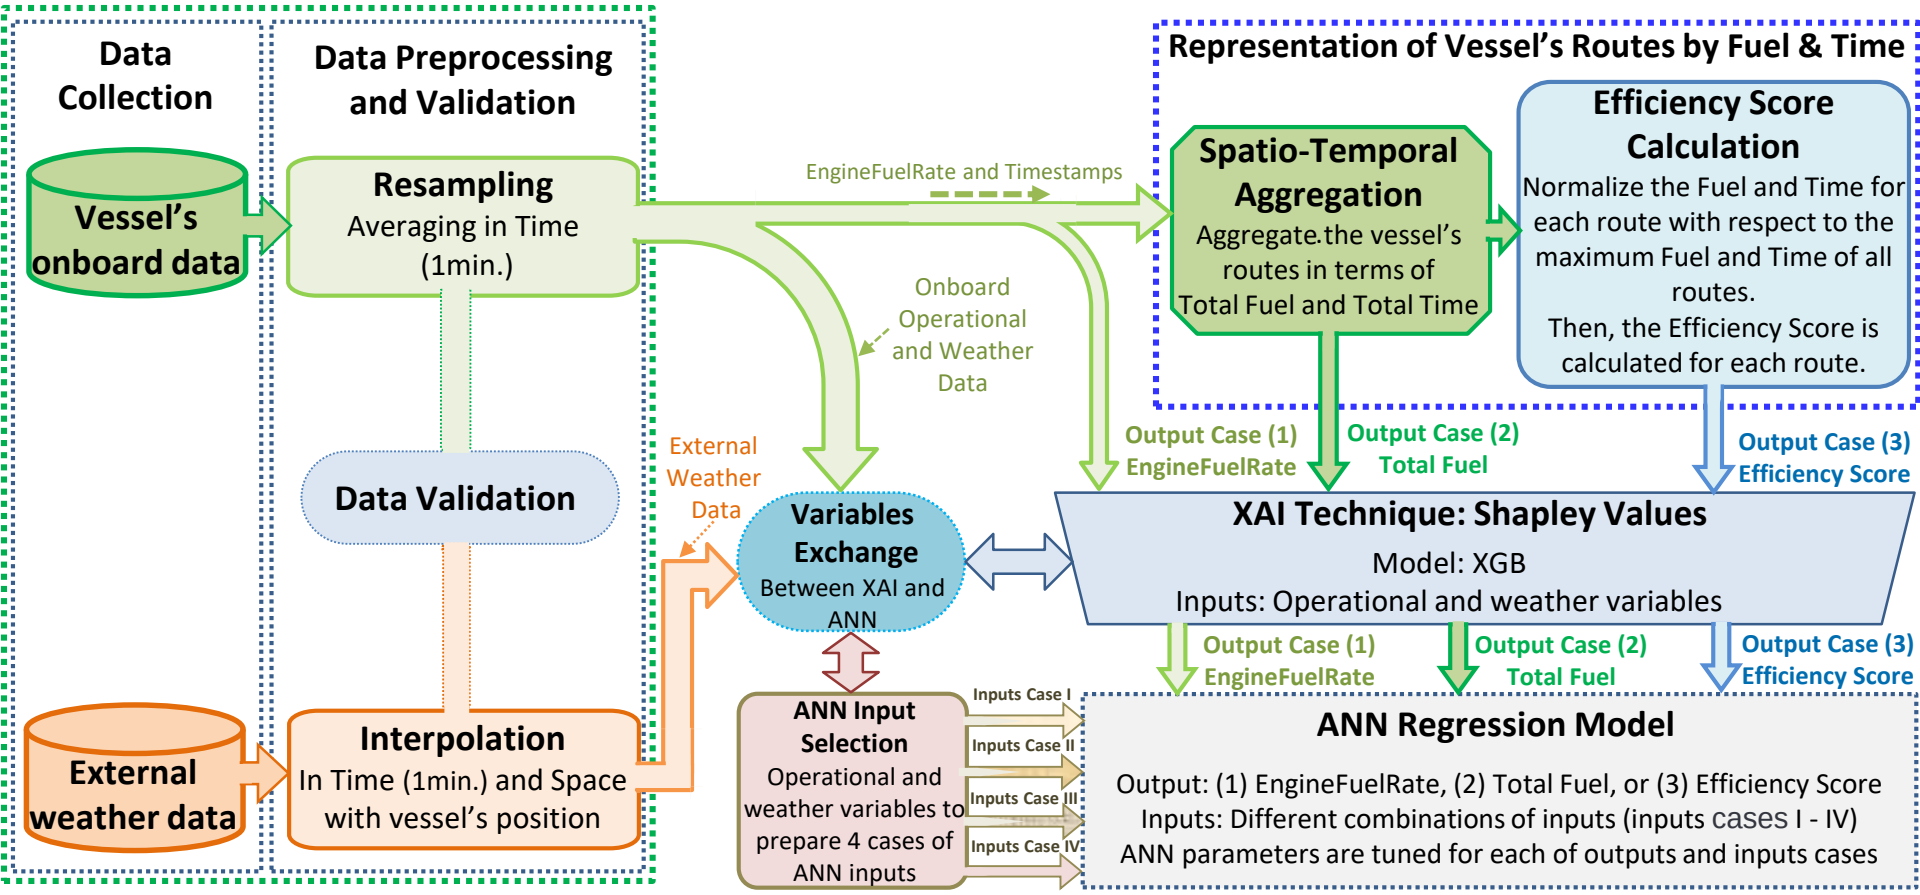






Research

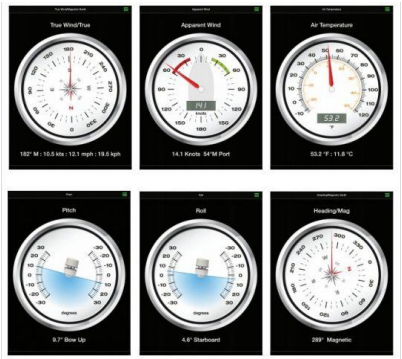
Workflow of Applying XAI for Improving the Vessel's Energy Efficiency



Research

Problem Formulation

Objective Function:
Minimizing the fuel consumption

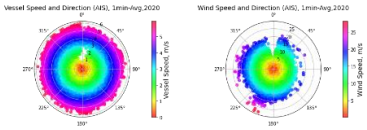


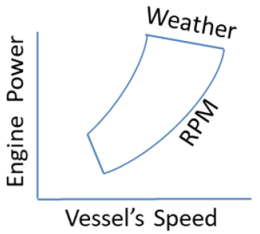
Solutions Finding

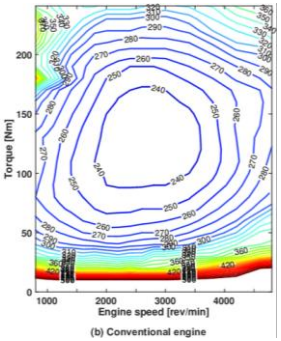
Solving algorithm:
Modeling and managing the engine power at any weather conditions by using a fuel estimation model

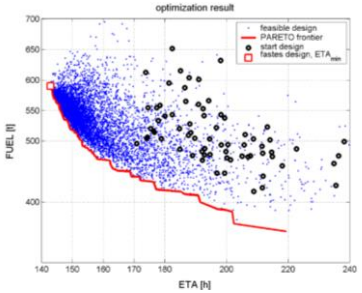
Control variables:
Ship's speed and course

Constraints:
Arrival time, geographic, safety, route smoothness, the ship's roll, and the engine power









Objective:
Minimum fuel consumption

Research

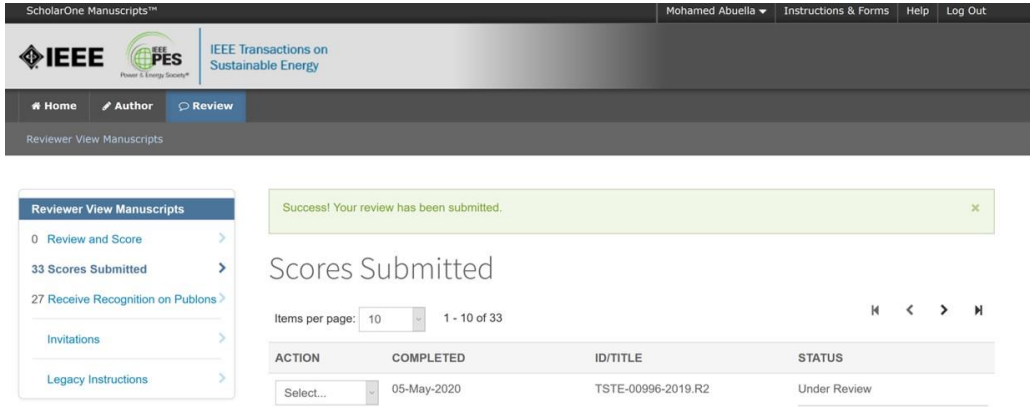
- Power System Flexibility and DG resources management, I have been working on Forecasting and Machine Learning approaches, since 2014

- Techno-economic analysis of HOMER, NREL SAM, and PVLib Toolbox for Python.

- Writing using Latex (Eqs, Biblio.), Mendeley (~10000 docs, tags), Evernote (organize notes, share them), Dropbox, Google Drive (clouds to back up), iCalendar, etc.

- Research Outreach and Knowledge Dissemination: depending extensively on the online tools, such as Blogs on personal website, LinkedIn, Twitter, Researchgate, Newsletter from relevant groups of interest (ESIG, AI in Smart Grids, ISES, WEMC, etc.)

- Review of IEEE Transactions on Sustainable Energy



Thanks for Your Listening
