Introduction

Mohamed Abuella

<https://mohamedabuella.github.io>

<https://www.linkedin.com/in/mohamed-abuella/>

About Me..

An electrical engineer by training, traditionally is interested in Mathematical and Computational Analysis, Modeling and Optimization, and who is recently passionate in Artificial Intelligence and Data-driven Analytics.

A researcher works to modernize the electric grid and optimize its integration of distributed energy resources by applying descriptive, predictive and prescriptive analytics.

An adaptative to work in a diverse environment for an interdisciplinary research.

Introduction

To sum it up in a broad sense, let's imagine that.. If my professional development was a book, its title would be **“Electric Power Systems Operation and Planning”**

Thus, the chapters of this book would be as follows:

Ch.1 Fundamentals of Electrical Engineering. This chapter covers Instrumentation & Control, Basics of Power Electronics such as Diodes & Thyristors as rectifiers, (maneuvered by applying Laws of Physics). With getting hands-on electrical installation & wiring and maintenance of electrical control equipment at pumping stations.

Ch.2 Power Systems Analysis. It includes Power Flow and Faults Calculations, (applying Numerical Analysis methods, such as Newton methods, Differential eqs & Integrals, etc). Get hands-on some simulations of power systems and programmable logic controllers (PLC).

Ch.3 Optimal Power Flow (OPF) and Security-Constrained Economic Dispatch (SCED). It is considering renewables as well, specifically for wind energy resources at the transmission level, (applying Optimization techniques). Get hands-on more of modeling and analysis of power systems.

Ch.4 Optimize the Integration of Renewables into the Grid. Solar Power Modeling and Forecasting, (applying Descriptive, Predictive and Prescriptive Analytics, AI and ML techniques). Get hands-on data-driven analytics and become more familiar with conducting & publishing research.

Ch.5 Who knows!

Introduction

In a nutshell, what I am often doing is finding the optimal & root values and curve fitting of nonlinear equations.

..But usually it is not as simple as that!

For more details, you may have a look at pdf copies of my [CV](#) and [Cloud of Key Skills & Interests](#).

Motivation

- Professional Advancement
 - ✓ Get an opportunity to collaborate and work with the experts of the field.
 - ✓ To transfer, improve, and acquire knowledge and skills.
- Personal Advancement
 - ✓ Better alignment with personal values and interests.
 - ✓ Better self-esteem.
 - ✓ Better financial security.

are Too Variable**

**Coordination with Operating
Reserves and Energy Storage
Systems**

**Reducing
Cost
and Pollution**

Illustration of the motivation of PV solar power forecasts

Research

Definition of Ramp Events

Solar power ramp rate (RR) is *the change of solar power during a certain time interval*.

$$\text{Ramp Rate, } RR(t) = \frac{dP(t)}{dt} = \frac{P(t + D) - P(t)}{D}$$

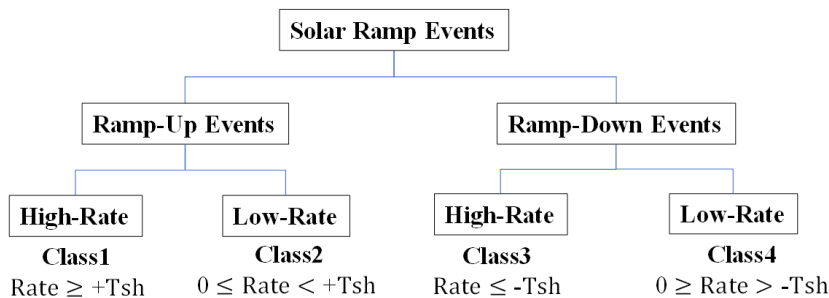

where $P(t)$ is the solar power of the target hour, it can also be its forecast $F(t)$; D is the time duration for which the ramp rate is determined.

For the illustrated cloudy day below:

Ramp rate, $\frac{\Delta P}{\Delta t} = \frac{0.2 - 0.85}{12:00 - 11:00} = -0.65$ (−65%) *ramp down of its normal capacity, (pu/hr)*

Ramp rate, $\frac{\Delta P}{\Delta t} = \frac{0.48 - 0.1}{14:00 - 13:00} = +0.38$ (+38%) *ramp up of its normal capacity, (pu/hr)*

Some ramps are with low rates, while others with high rates.

Distribution of the classes of solar power ramp events

Ramp Events During a Cloudy Day

Research

Potential Applications

There are several applications of power systems that rely on solar power ramp event forecasts

Distribution level:

- Optimizing the voltage regulation equipment.
- Control schemes of energy storage systems.

Transmission / bulk level:

- Trading & dispatching the operating reserve.
- Managing the ramp capability / system flexibility with high-level of renewable energy integration.

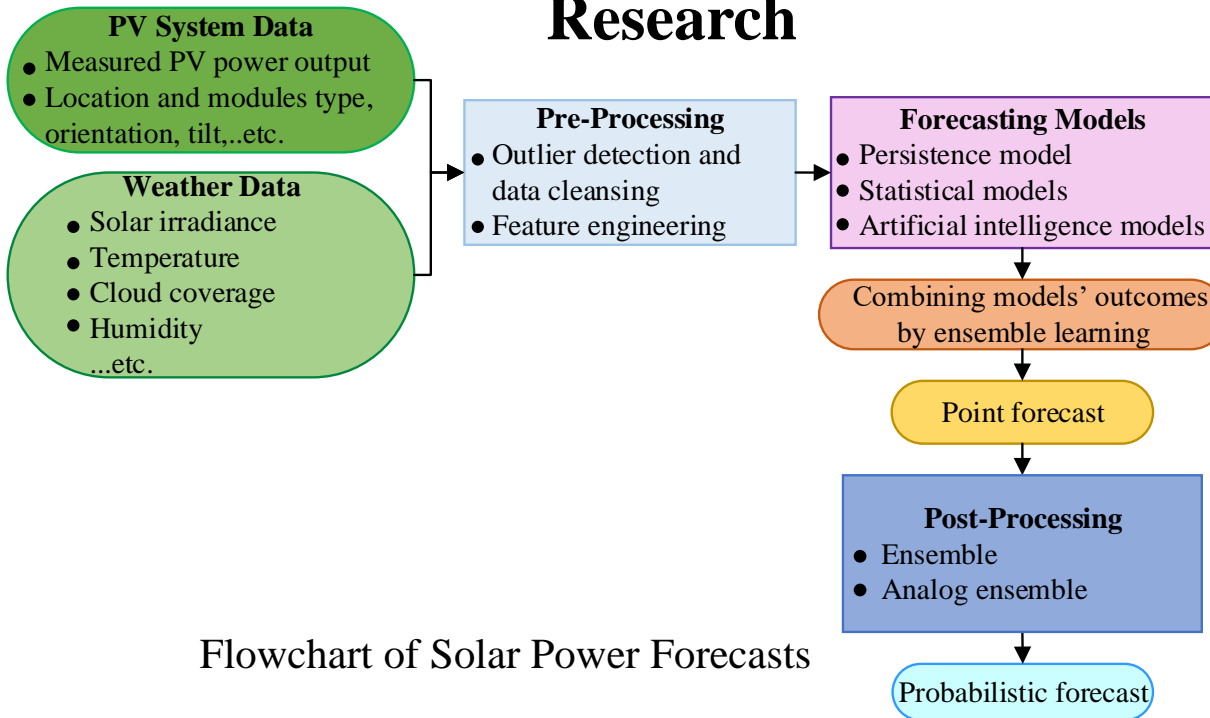

Optimizing the Transformer's Tap Changer position sequences using the solar forecast

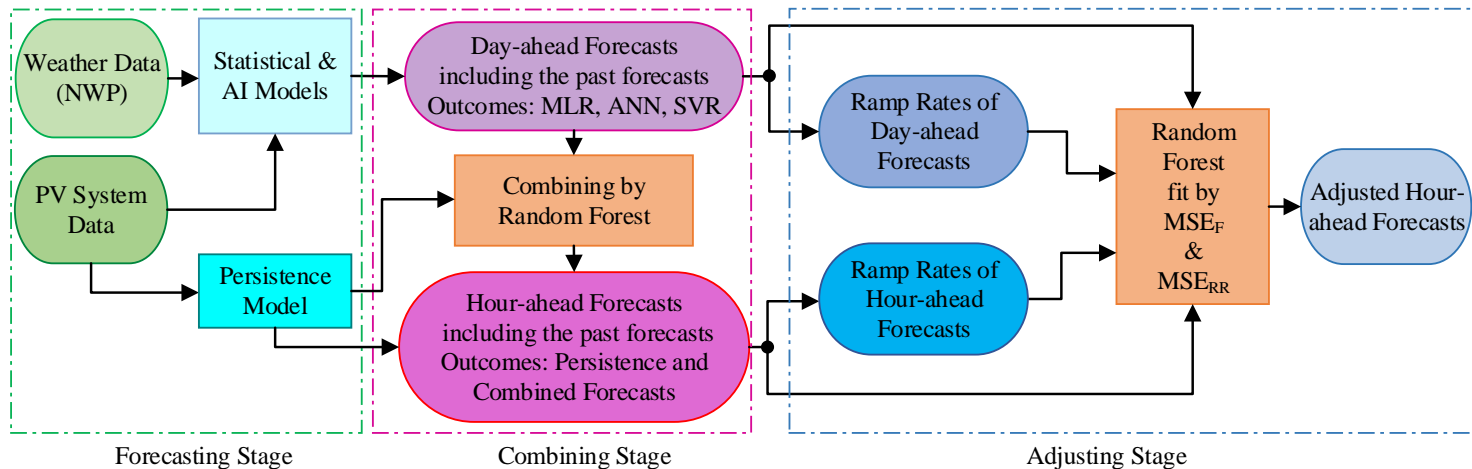

EPEX: European power exchange spot trading

Research

- Power System Flexibility and DG resources management, I have been working on Forecasting and Machine Learning approaches, since 2014
- Techno-economic analysis of HOMER (Report), C:\+HP Folders\+Folder2021\+Homer ProExs and examples of using NREL SAM, C:\Users\Mhdella\Desktop\Exs_SAM
- Writing using Latex (Eqs, Biblio.), Mendeley (>5500 docs, tags), Evernote (organize notes, share them), Dropbox, Google Drive (clouds to back up), iCalendar, etc.
- Research Outreach and Knowledge Dissemination: depending extensively on the online tools, such as Blogs on personal website, LinkedIn, Twitter, Researchgate, Newsletter from relevant groups of interest (ESIG, AI in Smart Grids, ISES, WEMC, etc.)
- Review of IEEE Transactions on Sustainable Energy

The screenshot displays the ScholarOne Manuscripts web interface. At the top, the user is logged in as 'Mohamed Abuella'. The main header includes the IEEE logo and the journal title 'IEEE Transactions on Sustainable Energy'. A navigation bar shows 'Home', 'Author', and 'Review' tabs, with 'Review' being the active tab. Below this, a sidebar on the left lists 'Reviewer View Manuscripts' with options like 'Review and Score', 'Scores Submitted', and 'Receive Recognition on Publons'. The main content area shows a green success message: 'Success! Your review has been submitted.' Below this, the section 'Scores Submitted' is visible, showing '1 - 10 of 33' items. A table lists the submission details:

ACTION	COMPLETED	ID/TITLE	STATUS
Select...	05-May-2020	TSTE-00996-2019.R2	Under Review

Interactive Data Dashboard in Jupyter Notebooks

ipywidgets, also known as *jupyter-widgets* or simply *widgets*, are [interactive HTML widgets](https://github.com/mhdella/energyDS/blob/master/Prerequisites/08%20Plotting.ipynb)
<https://github.com/mhdella/energyDS/blob/master/Prerequisites/08 Plotting.ipynb>

To install the widgets on your own computer, follow the instructions at
https://ipywidgets.readthedocs.io/en/latest/user_install.html

Example:

```
from ipywidgets import interact
..
plt.plot(t,  $\alpha \cdot \sin(\omega \cdot t)$ )
```

```
In [12]: 1 def plot( $\omega=1$ ,  $\alpha=1$ ):
2         t = np.linspace(0, 2*np.pi, 200)
3         plt.xlabel('$t$')
4         plt.ylabel('$A_m$')
5         plt.ylim((-2,2))
6         plt.title(r'$\alpha$ = {}, $\omega$ = {}'.format( $\alpha$ ,  $\omega$ ))
7         plt.plot(t,  $\alpha \cdot \sin(\omega \cdot t)$ )
8         plt.grid()
9         plt.show()
```

```
In [13]: 1 interact(plot,  $\omega=(-10, 10, 0.25)$ ,  $\alpha=(0, 2, 0.25)$ );
```

ω 1.00
 α 1.00

ω 4.00
 α 1.00

ω 3.00
 α 1.75
