Presentation Outline

Introduction

Mohamed Abuella

<https://mohamedabuella.github.io>

<https://www.linkedin.com/in/mohamed-abuella/>

About Me..

An electrical engineer by training, traditionally interested in Mathematical and Computational Analysis, Modeling and Optimization, and who is recently passionate in Artificial Intelligence and Data-driven Analytics.

A researcher works to modernize the electric grid and optimize its integration of distributed energy resources by applying descriptive, predictive and prescriptive analytics.

An adaptive to work in a diverse environment for an interdisciplinary research.

Introduction

To sum it up in a broad sense, let's imagine that.. If my professional development was a book, its title would be **“Electric Power Systems Operation and Planning”**

Thus, the chapters of this book would be as follows:

Ch.1 Fundamentals of Electrical Engineering. This chapter covers Instrumentation & Control, Basics of Power Electronics such as Diodes & Thyristors as rectifiers, (maneuvered by applying Laws of Physics). With getting hands-on electrical installation & wiring and maintenance of electrical control equipment at pumping stations.

Ch.2 Power Systems Analysis. It includes Power Flow and Faults Calculations, (applying Numerical Analysis methods, such as Newton methods, Differential eqs & Integrals, etc). Get hands-on some simulations of power systems and programmable logic controllers (PLC).

Ch.3 Optimal Power Flow (OPF) and Security-Constrained Economic Dispatch (SCED). It is considering renewables as well, specifically for wind energy resources at the transmission level, (applying Optimization techniques). Get hands-on more of modeling and analysis of power systems.

Ch.4 Optimize the Integration of Renewables into the Grid. Solar Power Modeling and Forecasting, (applying Descriptive, Predictive and Prescriptive Analytics, AI and ML techniques). Get hands-on data-driven analytics and become more familiar with conducting & publishing research.

Ch.5 Postdoctoral Researcher at the Center for Applied Intelligent Systems Research (CAISR) at Halmstad University, (applying AI and ML techniques). Dig into research questions trying to get answers and insights for them by using data.

Ch.6 Who knows!

Introduction

In a nutshell, what I am often doing is finding the optimal & root values and curve fitting of nonlinear equations.

..But usually it is not as simple as that!

For more details, you may have a look at pdf copies of my [CV](#) and [Cloud of Key Skills & Interests](#).

The image is a word cloud centered around the word "energy". Other prominent words include "modeling", "renewable", "solar", "wind", "weather", "storage", "system", "utility", "research", "service", "pv", "ramp", "solar", "spatio-temporal", "wind", "forecasting", "meterology", "post-processing", "monitoring", "measurements", "iso", "grid", "integration", "learning", "market", "approach", "data", "day-ahead", and "forecasting". The words are in various sizes and shades of blue, set against a white background with a thin gray border.

Motivation

- Professional Advancement
 - ✓ Get an opportunity to collaborate and work with the experts of the field.
 - ✓ To transfer, improve, and acquire knowledge and skills.
- Personal Advancement
 - ✓ Better alignment with personal values and interests.
 - ✓ Better self-esteem.
 - ✓ Better financial security.

A Post-Processing Approach for Solar Power Combined Forecasts of Ramp Events

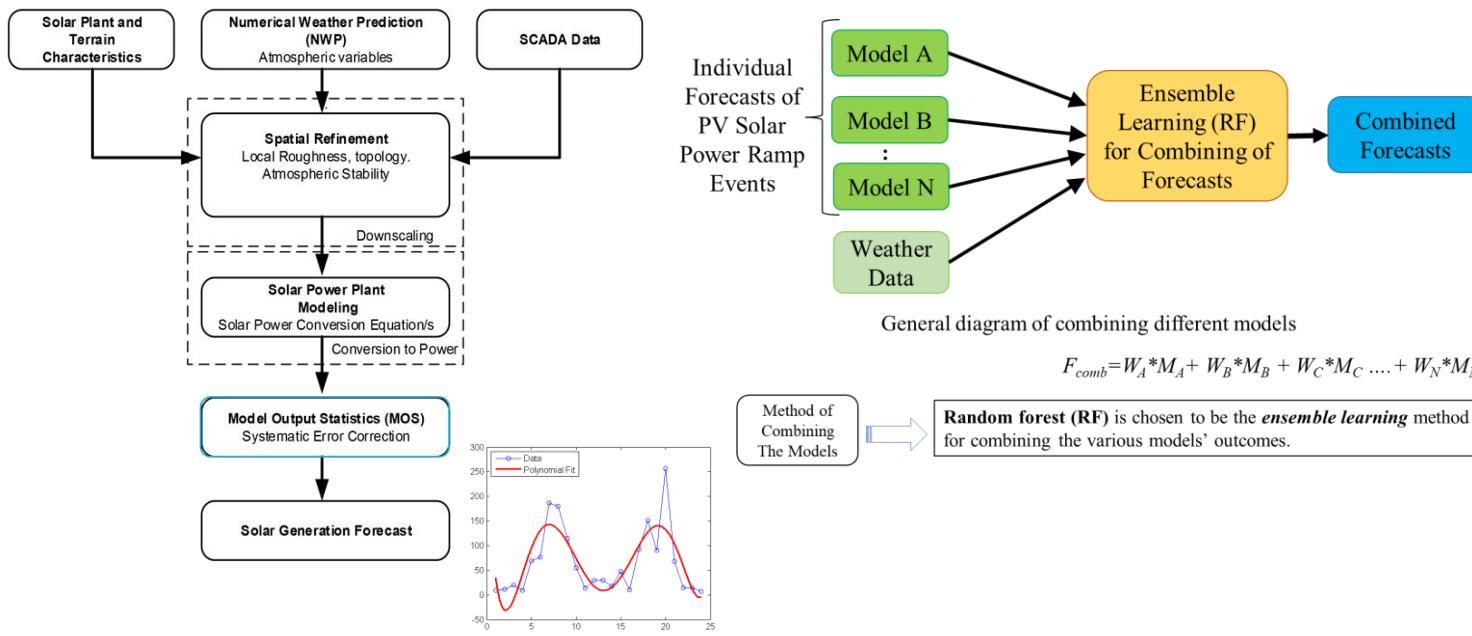

<https://www.proquest.com/openview/42049145119c7760f93ea736b37a0930/1.pdf?pq-origsite=gscholar&cbl=18750>

PhD Thesis, 2018 at University of North Carolina at Charlotte, USA

Advisor: Badrul Chowdhury

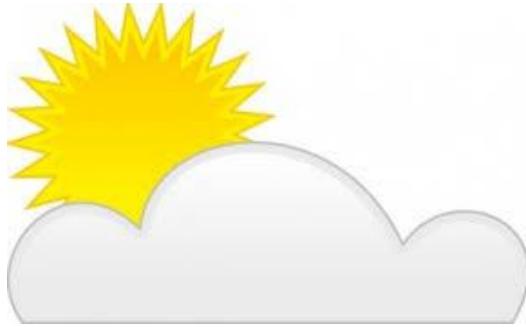

Acquired Expertise: Energy Analytics, Energy Markets, Renewable Energy Integration, Asset & Supply Chain, Time Series Analysis & Modeling, Risk & Uncertainty Quantification, Machine Learning, Big-Data Processing, Research Publishing & Peer Reviewing, Software Tools including SAS, R, and Python

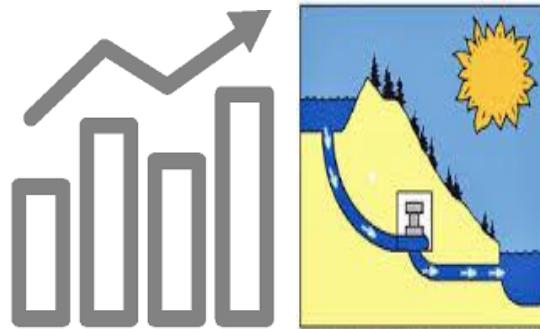

Research

$$P_{\text{Supply}} = P_{\text{Demand}} + P_{\text{Loss}}$$

PV Solar Power Generations are Too Variable

Coordination with Operating Reserves and Energy Storage Systems

Reducing Cost and Pollution

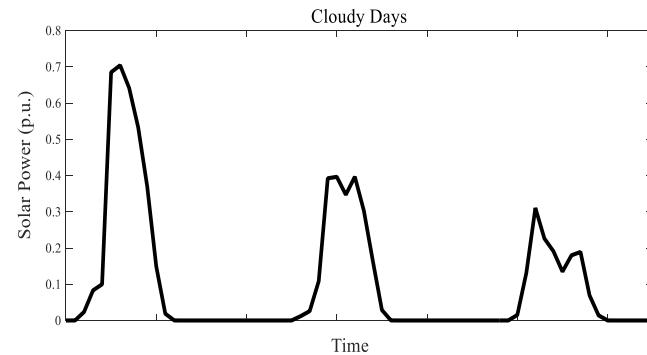

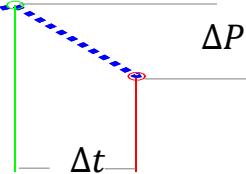

Illustration of the motivation of PV solar power forecasts

Research

Solar power ramp rate (RR) is *the change of solar power during a certain time interval*.

$$\text{Ramp Rate, } RR(t) = \frac{dP(t)}{dt} = \frac{P(t + D) - P(t)}{D}$$

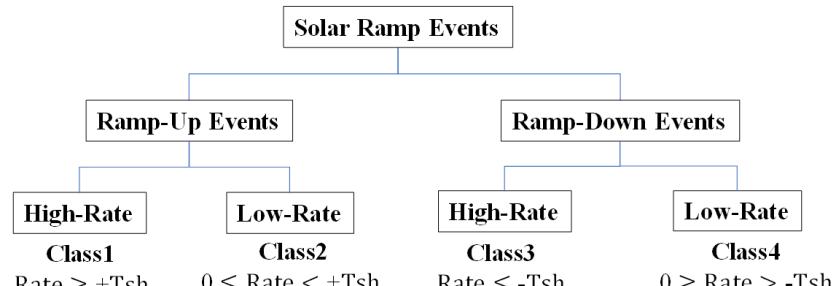

where $P(t)$ is the solar power of the target hour, it can also be its forecast $F(t)$; D is the time duration for which the ramp rate is determined.

For the illustrated cloudy day below:

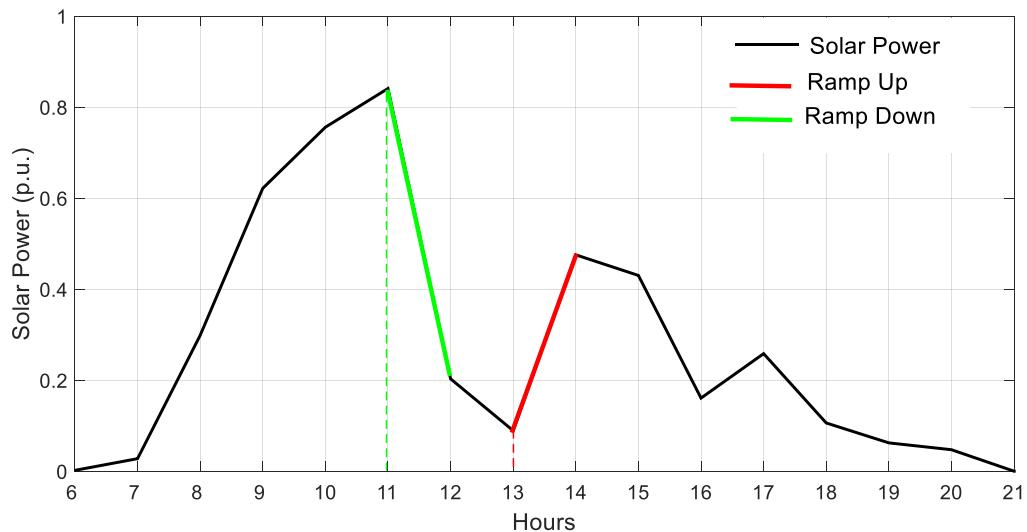

$$\text{Ramp rate, } \frac{\Delta P}{\Delta t} = \frac{0.2 - 0.85}{12:00 - 11:00} = -0.65 \text{ (-65%) ramp down of its normal capacity, (pu/hr)}$$

$$\text{Ramp rate, } \frac{\Delta P}{\Delta t} = \frac{0.48 - 0.1}{14:00 - 13:00} = +0.38 \text{ (+38%) ramp up of its normal capacity, (pu/hr)}$$

Some ramps are with low rates, while others with high rates.

Distribution of the classes of solar power ramp events

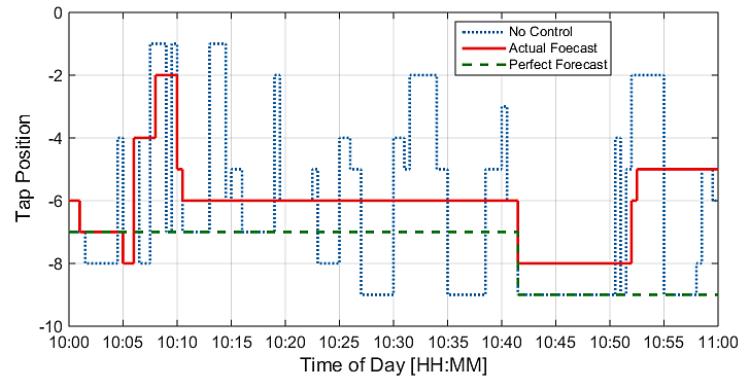

Ramp Events During a Cloudy Day

Research

There are several applications of power systems that rely on solar power ramp event forecasts

Distribution level:

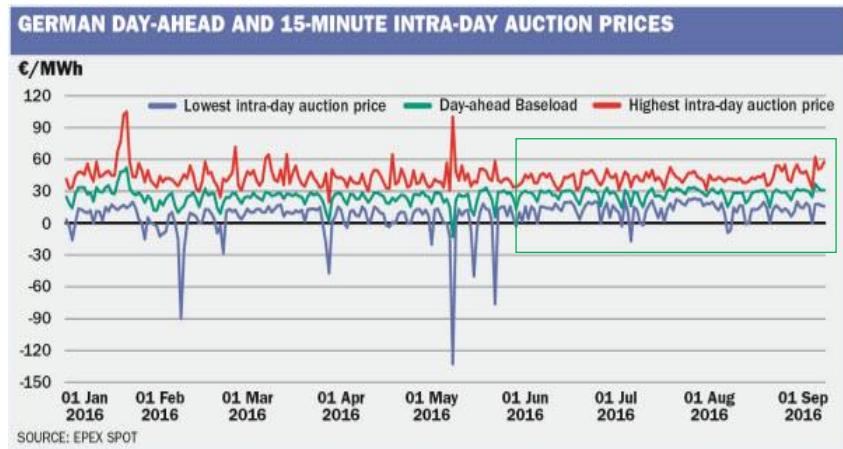

- Optimizing the voltage regulation equipment.
- Control schemes of energy storage systems.

Optimizing the Transformer's Tap Changer position sequences using the solar forecast

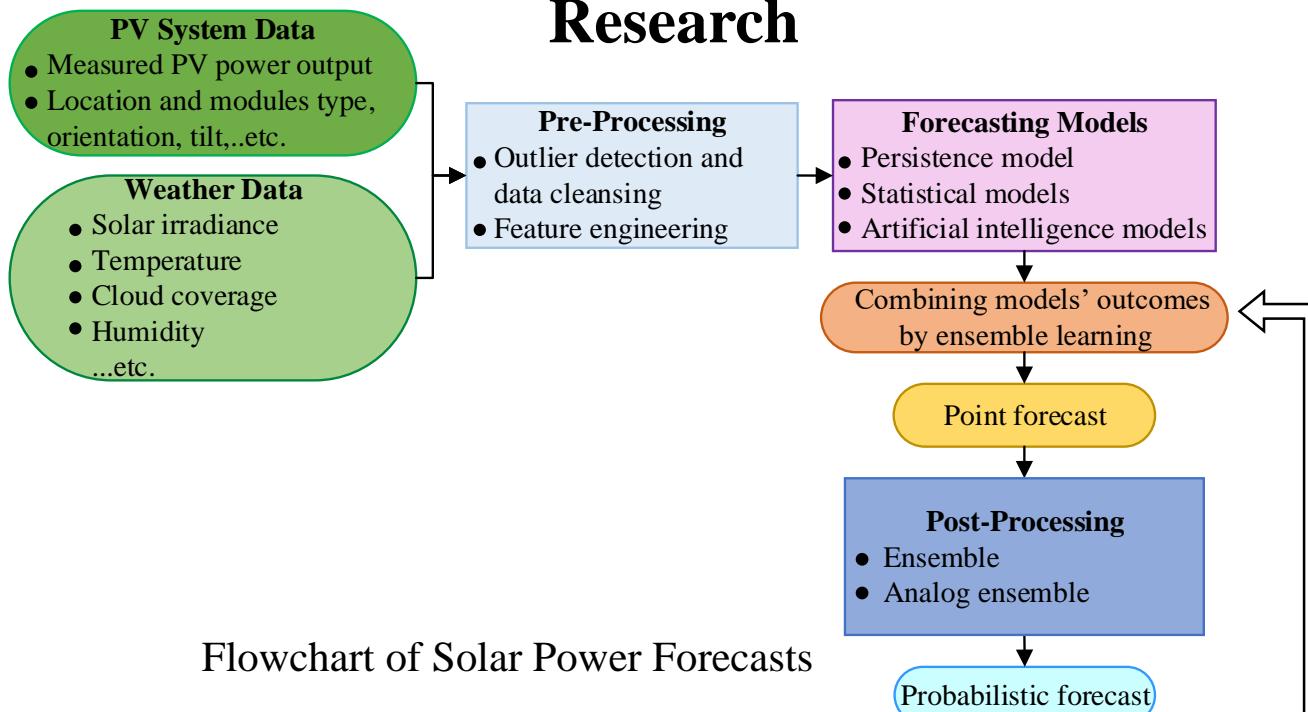

Transmission / bulk level:

- Trading & dispatching the operating reserve.
- Managing the ramp capability / system flexibility with high-level of renewable energy integration.

EPEX: European power exchange spot trading

Research

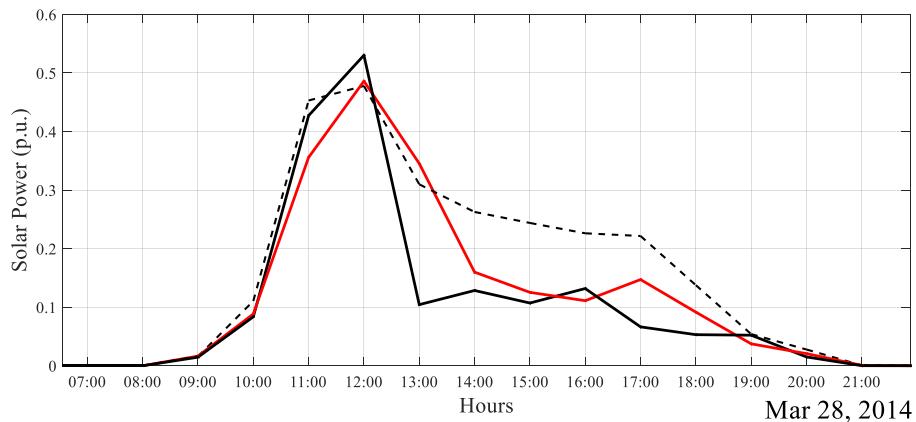

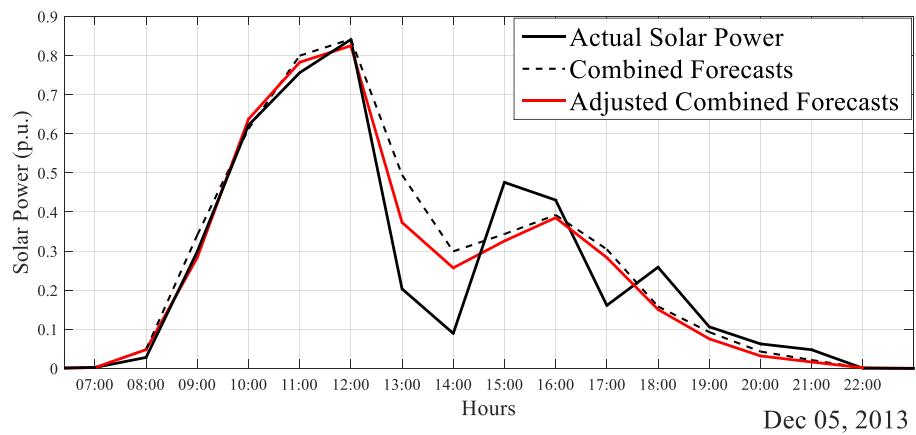

Flowchart of Solar Power Forecasts

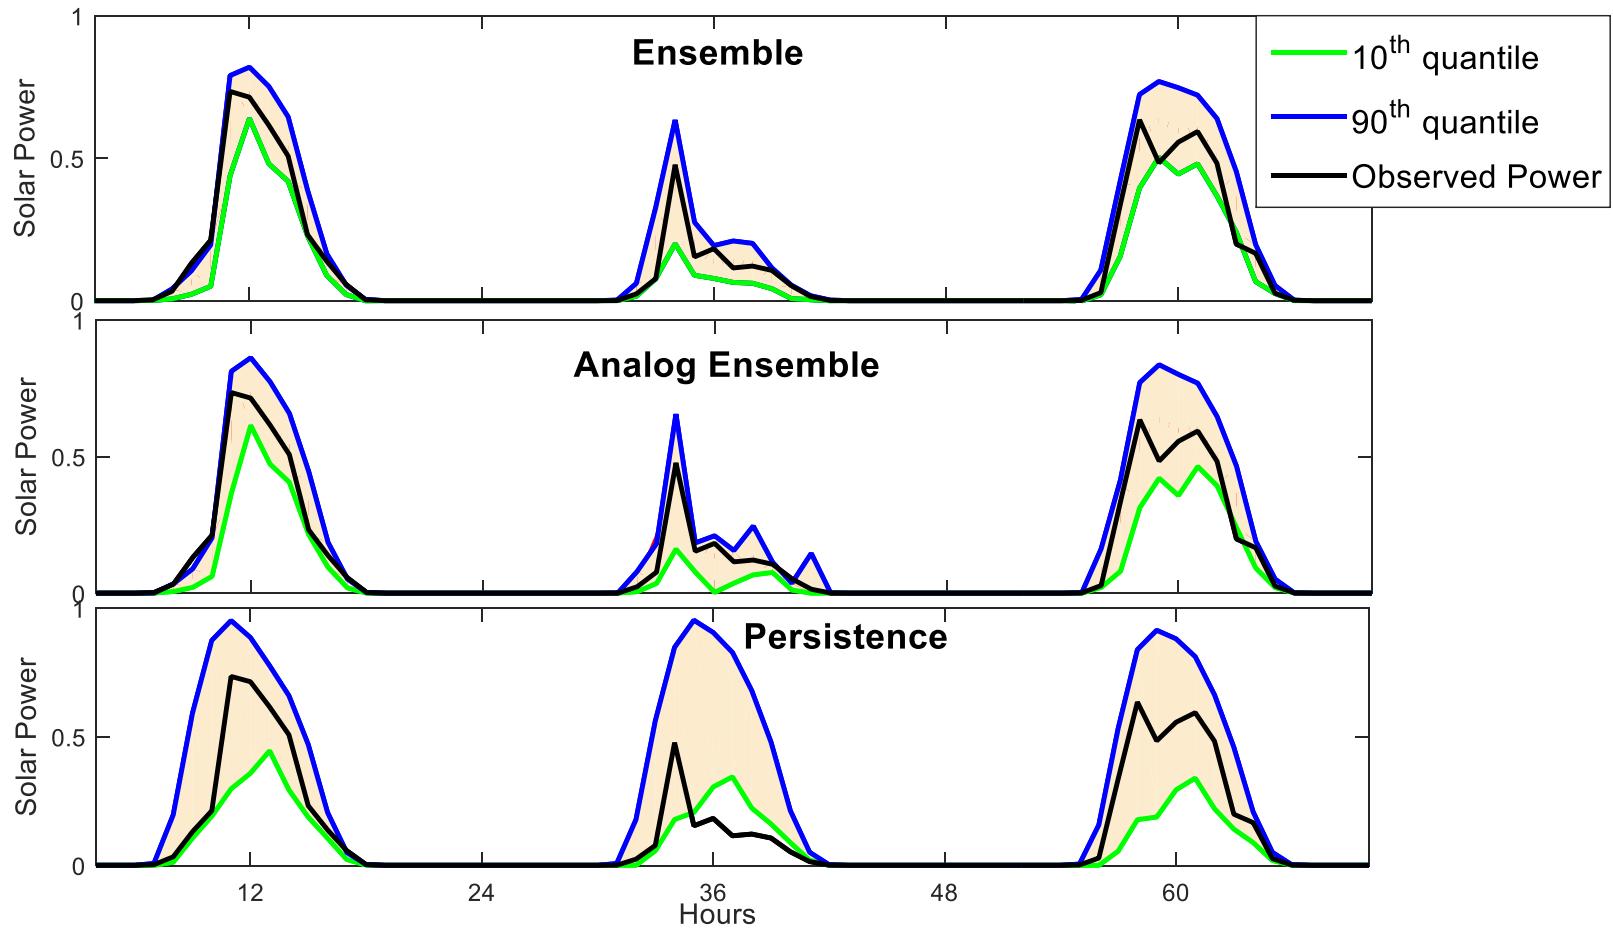

Block diagram of the adjusting approach

Research

Combined forecasts of solar power for cloudy days before and after applying the adjusting

Research

Graphs of the probabilistic forecasts of the three methods for three days

$$Skill\ Score\ (\%) = \left(1 - \frac{Metric_{method}}{Metric_{reference}} \right) * 100$$

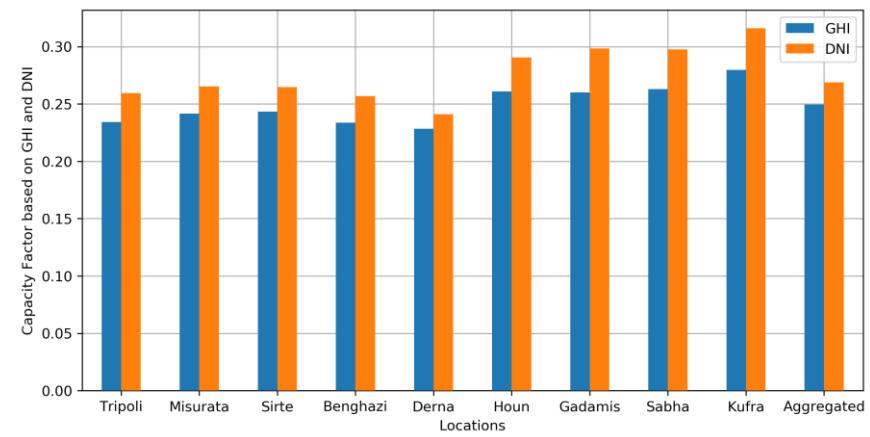

Research

Planning and Analysis for Solar Energy in Libya

9 Locations for Comparison of Solar Energy Modeling and Analysis: Tripoli, Misurata, Sirte, Benghazi, Derna, Houn, Gadamis, Sebha, Kufra
 Typical Meteorological Year (TMY) data represents the weather for a "median year". <https://developer.nrel.gov/>

The Capacity Factor is calculated based on Output power (PWac).
 The Rating of Solar PV System = 1000W during an entire year = 8760 hours.

Research

Planning and Analysis for Wind Energy in Libya

Tripoli, Misurata, Tarhunah, Ghanima, Msallata, Zuwara, Gharyan, Sirte, Benghazi, Magrun, Derna, Houn, Gadamis, Sabha, Kufra, Tobruk, Jaghbub

Typical Meteorological Year (TMY) data represents the weather for a "median year". Data are retrieved from NREL's Developer Network:

<https://developer.nrel.gov/> Comparison of Monthly Average Wind Speed (m/s) at Height of 10m

The Capacity Factor is calculated based on Output power (PWac).

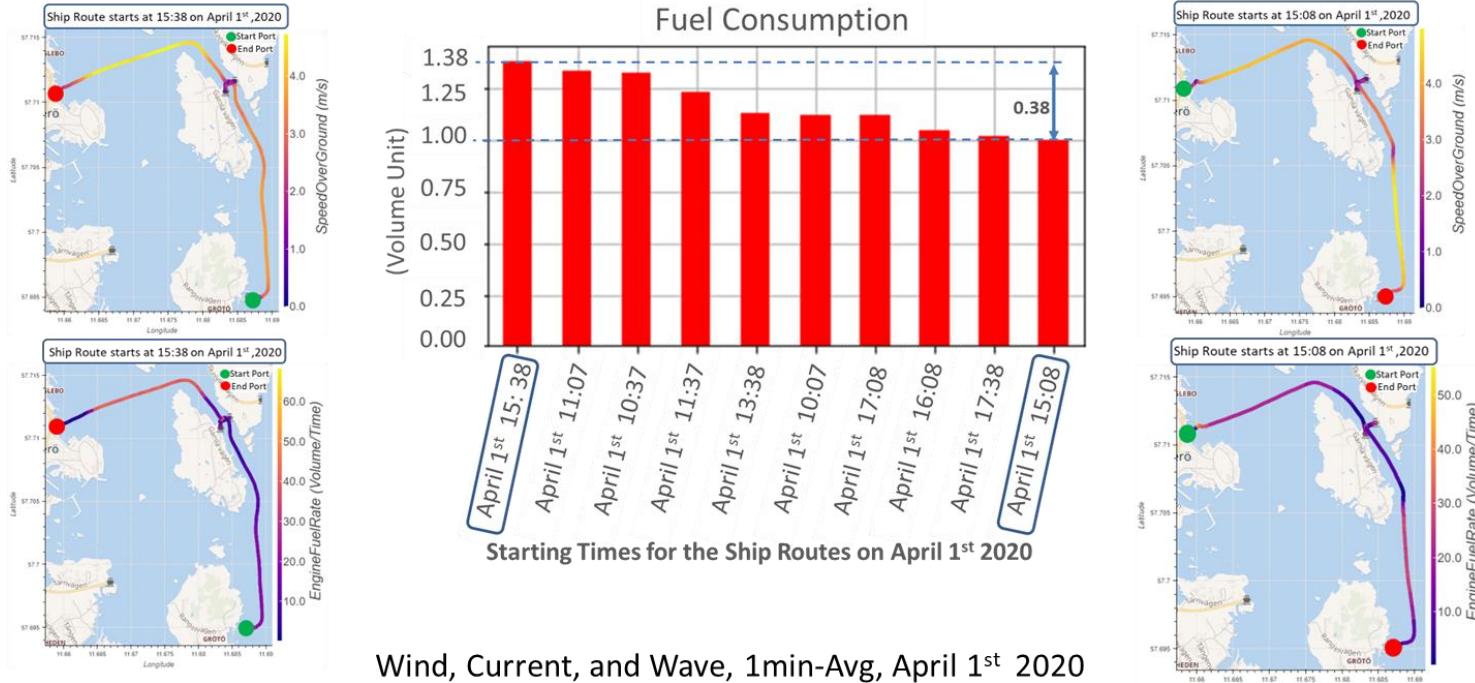

The Rating of Solar PV System =1000W during an entire year = 8760 hours.

Berlin in Germany has been added just for sake of comparison.

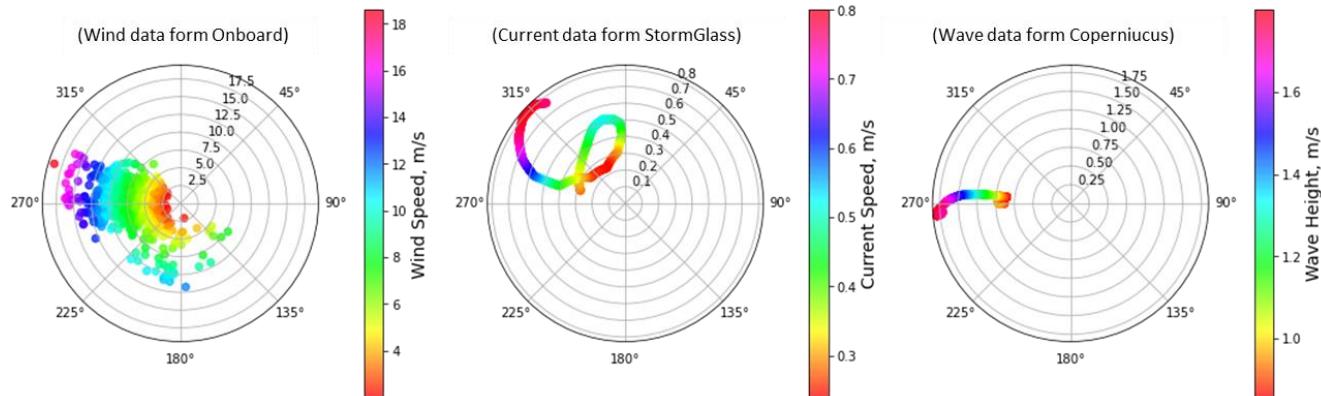

Research

Research Work for Improving the Vessel's Energy Efficiency

Wind, Current, and Wave, 1min-Avg, April 1st 2020

Research

Data Analytics for Improving the Vessel's Energy Efficiency

Descriptive Modeling

Input: Data of vessel's operational and environmental data, from onboard and external sources.

Outcome: Dataset for training and validation the predictive and prescriptive models.

Predictive Modeling

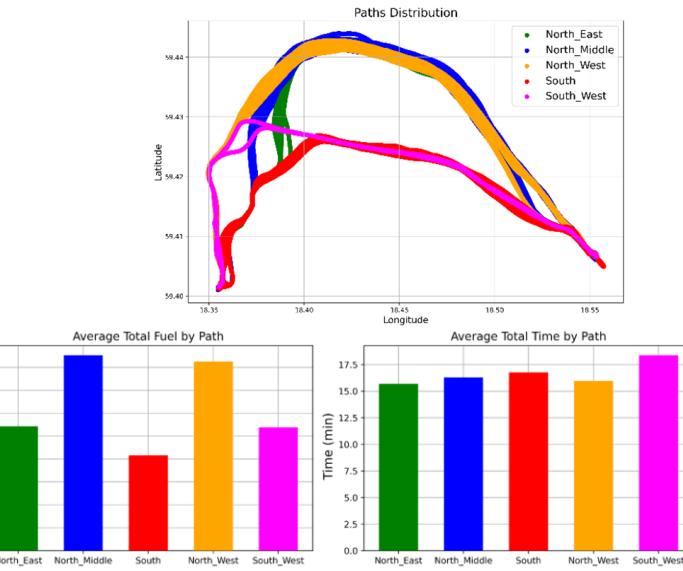

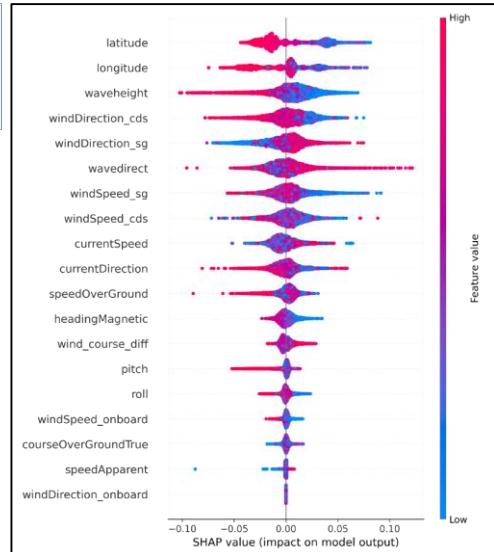

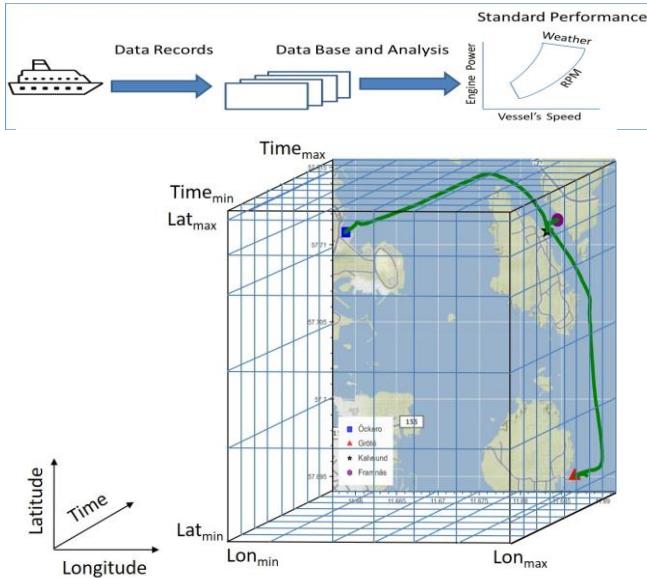

Input: Preprocessed data include operating and weather variables, such as vessel's speed and course, wind, wave, current, etc.

Outcome: Validated predictive models for fuel, distance and time.

Prescriptive Modeling

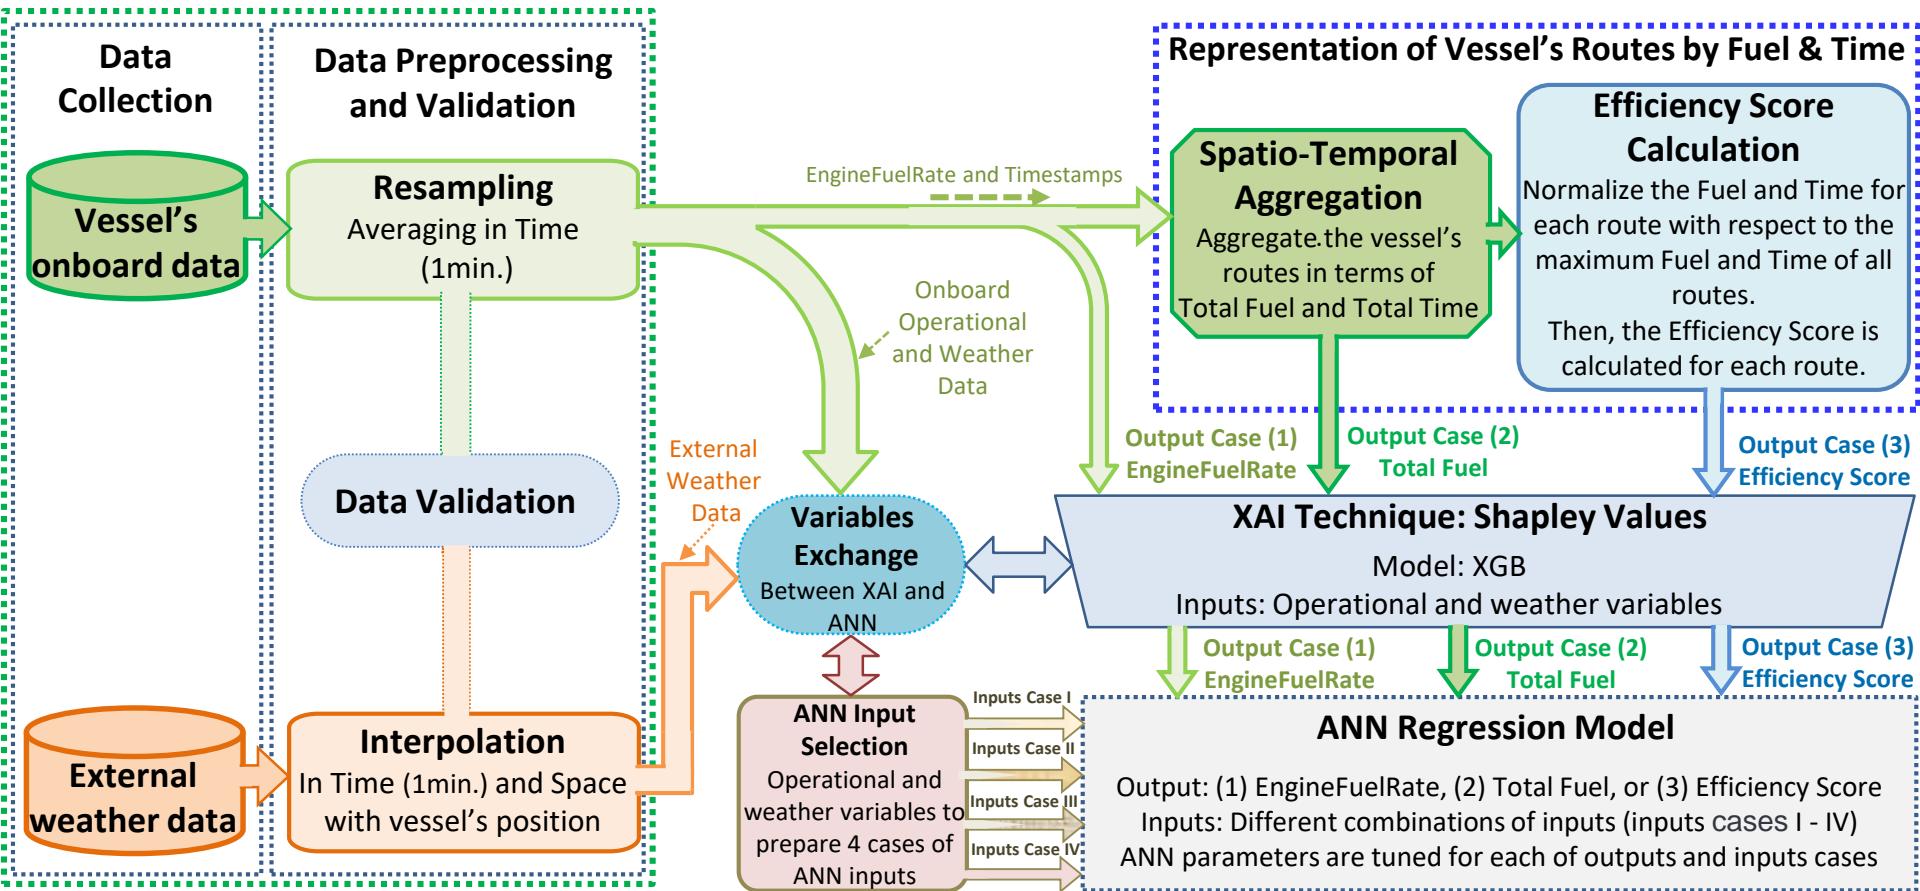

Input: Using solving algorithms, with control variables, such as vessel's speed and course, to find the optimal fuel and time.

Outcome: Improving fuel consumption and meeting the operational conditions

Research

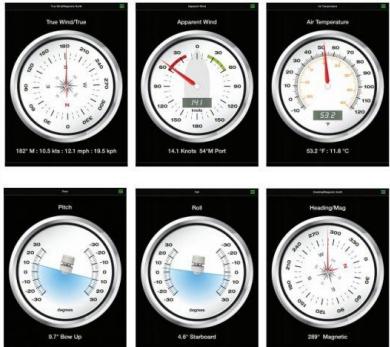

Workflow of Applying XAI for Improving the Vessel's Energy Efficiency

Research

Problem Formulation

Objective Function:
Minimizing the fuel consumption

Solutions Finding

Solving algorithm:

Modeling and managing the engine power at any weather conditions by using a fuel estimation model

Control variables:
Ship's speed and course

Constraints:

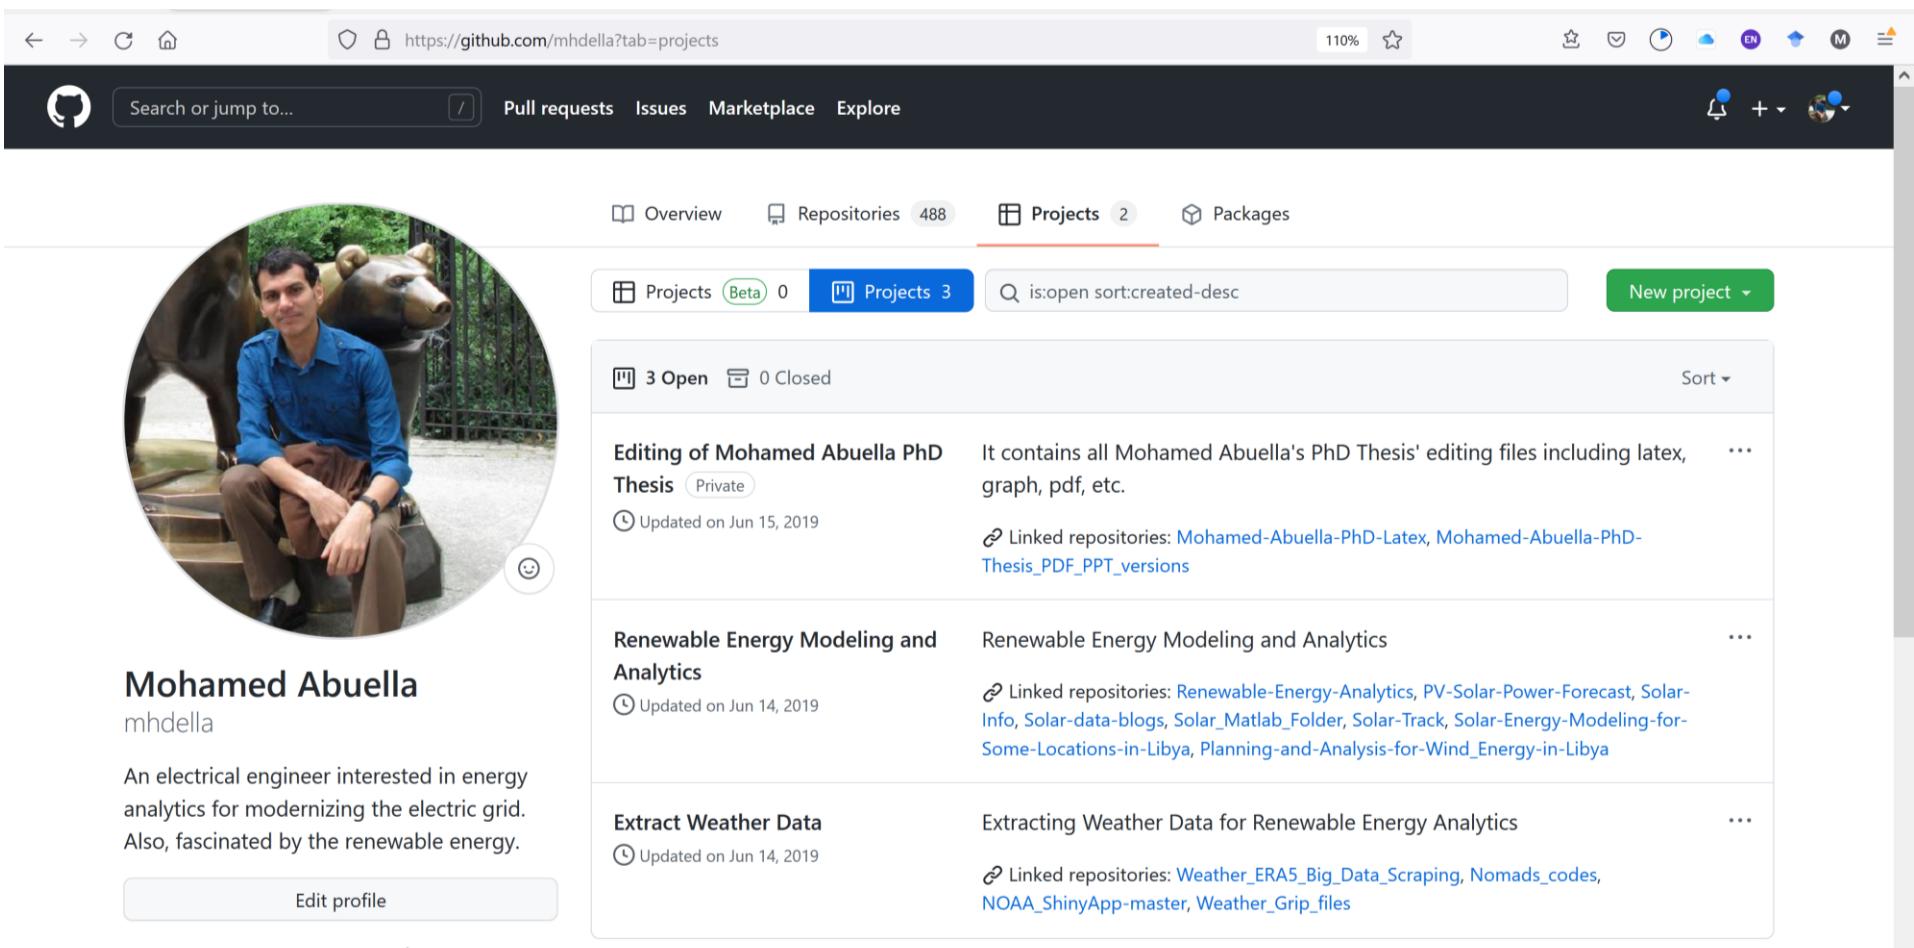

Arrival time, geographic, safety, route smoothness, the ship's roll, and the engine power

Objective:
Minimum fuel consumption

Research

Some other Projects in GitHub: <https://github.com/mhdella?tab=projects>

The screenshot shows Mohamed Abuella's GitHub profile page. On the left, there is a large circular profile picture of him sitting next to a bronze bear statue. Below the picture, his name "Mohamed Abuella" and GitHub handle "mhdella" are displayed. A bio states: "An electrical engineer interested in energy analytics for modernizing the electric grid. Also, fascinated by the renewable energy." A "Edit profile" button is visible. At the top of the page, the URL "https://github.com/mhdella?tab=projects" is shown in the address bar, along with browser controls and a 110% zoom level. The main navigation bar includes "Pull requests", "Issues", "Marketplace", "Explore", and a search bar. Below the navigation, tabs for "Overview", "Repositories 488", "Projects 2", and "Packages" are present, with "Projects" being the active tab. A sub-header for "Projects Beta 0" and "Projects 3" is shown, along with a search bar containing "is:open sort:created-desc" and a "New project" button. The "Projects" section lists three open projects:

- Editing of Mohamed Abuella PhD Thesis** (Private) - Last updated on Jun 15, 2019. Description: It contains all Mohamed Abuella's PhD Thesis' editing files including latex, graph, pdf, etc. Linked repositories: Mohamed-Abuella-PhD-Latex, Mohamed-Abuella-PhD-Thesis_PDF_PPT_versions.
- Renewable Energy Modeling and Analytics** - Last updated on Jun 14, 2019. Description: Renewable Energy Modeling and Analytics. Linked repositories: Renewable-Energy-Analytics, PV-Solar-Power-Forecast, Solar-Info, Solar-data-blogs, Solar_Matlab_Folder, Solar-Track, Solar-Energy-Modeling-for-Some-Locations-in-Libya, Planning-and-Analysis-for-Wind_Energy-in-Libya.
- Extract Weather Data** - Last updated on Jun 14, 2019. Description: Extracting Weather Data for Renewable Energy Analytics. Linked repositories: Weather_ERAS_Big_Data_Scraping, Nomads_codes, NOAA_ShinyApp-master, Weather_Grip_files.

Research

- Power System Flexibility and DG resources management, I have been working on Forecasting and Machine Learning approaches, since 2014
- Techno-economic analysis of HOMER, NREL SAM, and PVLib Toolbox for Python.
- Writing using Latex (Eqs, Biblio.), Mendeley (~10000 docs, tags), Evernote (organize notes, share them), Dropbox, Google Drive (clouds to back up), iCalendar, etc.
- Research Outreach and Knowledge Dissemination: depending extensively on the online tools, such as Blogs on personal website, LinkedIn, Twitter, Researchgate, Newsletter from relevant groups of interest (ESIG, AI in Smart Grids, ISES, WEMC, etc.)
- Review of IEEE Transactions on Sustainable Energy

The screenshot shows the IEEE ScholarOne Manuscripts interface. At the top, there are logos for IEEE and IEEE PES, and the title "IEEE Transactions on Sustainable Energy". The navigation bar includes links for Home, Author, and Review, with "Review" being the active tab. A dropdown menu shows the user is logged in as "Mohamed Abuela". Other options in the header include "Instructions & Forms", "Help", and "Log Out".

In the main content area, a green success message box says "Success! Your review has been submitted." Below it, a section titled "Scores Submitted" displays a table of submitted reviews:

ACTION	COMPLETED	ID/TITLE	STATUS
Select...	05-May-2020	TSTE-00996-2019.R2	Under Review

On the left sidebar, there are other navigation links: "Reviewer View Manuscripts", "Review and Score", "33 Scores Submitted", "27 Receive Recognition on Publons", "Invitations", and "Legacy Instructions".

Thanks for Your Listening
