# **Presentation Outline**

# Introduction

Mohamed Abuella

<https://mohamedabuella.github.io>

<https://www.linkedin.com/in/mohamed-abuella/>

## About Me..

An electrical engineer by training, traditionally is interested in Mathematical and Computational Analysis, Modeling and Optimization, and who is recently passionate in Artificial Intelligence and Data-driven Analytics.

A researcher works to modernize the electric grid and optimize its integration of distributed energy resources by applying descriptive, predictive and prescriptive analytics.

His broader interest involves utilizing Artificial Intelligence to foster Sustainability.

An adaptative to work in a diverse environment for an interdisciplinary research.

# Introduction

<https://mohamedabuella.github.io/cv>

To sum it up in a broad sense, let's imagine that.. If my professional development was a book, its title would be "**Energy Systems Modeling and Analysis: Operation, Planning, and Integration.**"

*Thus, the chapters of this book would be as follows:*

**Ch.1** Fundamentals of Electrical Engineering. This chapter covers Instrumentation & Control, Basics of Power Electronics such as Diodes & Thyristors as rectifiers, (maneuvered by applying Laws of Physics). With getting hands-on electrical installation & wiring and maintenance of electrical control equipment at pumping stations.

**Ch.2** Power Systems Analysis. It includes Power Flow and Faults Calculations, (applying Numerical Analysis methods, such as Newton methods, Differential eqs & Integrals, etc). Get hands-on some simulations of power systems and programmable logic controllers (PLC).

**Ch.3** Optimal Power Flow (OPF) and Security-Constrained Economic Dispatch (SCED). It is considering renewables as well, specifically for wind energy resources at the transmission level, (applying Optimization techniques). Get hands-on more of modeling and analysis of power systems.

**Ch.4** Optimize the Integration of Renewables into the Grid. Solar Power Modeling and Forecasting, (applying Descriptive, Predictive and Prescriptive Analytics, AI and ML techniques). Get hands-on data-driven analytics and become more familiar with conducting & publishing research.

**Ch.5** Postdoctoral Researcher at the Center for Applied Intelligent Systems Research (CAISR) at Halmstad University, (Integrated Academy-Industry Collaboration, Applying AI techniques). Dig into research on AI for Sustainability.

**Ch.6** Research Fellow at Northumbria University in HI ACT: Hydrogen Integration for Energy

# Introduction

In a nutshell, what I am often doing is finding the optimal & root values and curve fitting of nonlinear equations.

..But usually it is not as simple as that!

For more details, you may have a look at pdf copies of my [CV](#) and [Cloud of Key Skills & Interests](#).

# Introduction

## ***What can I bring to the team..?***

- Transfer knowledge and skills to integrate the collaboration between academy and industry:
  - ✓ Energy Systems Modeling & Analysis, Optimization, AI, Geospatial Analysis.
  - ✓ Including Transportation and Maritime Systems.
  - ✓ Including Water and Wastewater experience
- An adaptatively to diverse environment and flexibility to multidisciplinary research:
  - ✓ Study and work in Middle East (Libya): Engineering, Electricity, Water and Wastewater.
  - ✓ Study and work in North America (USA): Energy, Optimization, Statistics, AI.
  - ✓ Work in Europe (Sweden): Energy, Transportation, Maritime, AI.

# Motivation

- Professional Advancement
  - ✓ Get an opportunity to collaborate and work with the experts of the field.
  - ✓ To transfer, improve, and acquire knowledge and skills.
- Personal Advancement
  - ✓ Better alignment with personal values and interests.
  - ✓ Better self-esteem.
  - ✓ Better financial security.

A Post-Processing Approach for Solar Power Combined Forecasts of Ramp Events

<https://www.proquest.com/openview/42049145119c7760f93ea736b37a0930/1.pdf?pq-orignsite=gscholar&cbl=18750>

PhD Thesis, 2018 at University of North Carolina at Charlotte, USA

Advisor: Badrul Chowdhury

UNC CHARLOTTE

**Acquired Expertise:** Energy Analytics, Energy Markets, Renewable Energy Integration, Asset & Supply Chain, Time Series Analysis & Modeling, Risk & Uncertainty Quantification, Machine Learning, Big-Data Processing, Research Publishing & Peer Reviewing, Software Tools including SAS, R, and Python

General diagram of combining different models

$$F_{comb} = W_A * M_A + W_B * M_B + W_C * M_C + \dots + W_N * M_N$$

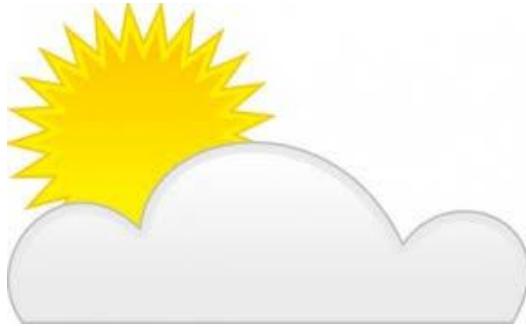

Method of Combining The Models → Random forest (RF) is chosen to be the **ensemble learning** method for combining the various models' outcomes.

# Research

$$P_{\text{Supply}} = P_{\text{Demand}} + P_{\text{Loss}}$$

**PV Solar Power Generations are Too Variable**

**Coordination with Operating Reserves and Energy Storage Systems**

**Reducing Cost and Pollution**

Illustration of the motivation of PV solar power forecasts

# Research

Solar power ramp rate (RR) is *the change of solar power during a certain time interval*.

$$\text{Ramp Rate, } RR(t) = \frac{dP(t)}{dt} = \frac{P(t + D) - P(t)}{D}$$

where  $P(t)$  is the solar power of the target hour, it can also be its forecast  $F(t)$ ;  $D$  is the time duration for which the ramp rate is determined.

For the illustrated cloudy day below:

$$\text{Ramp rate, } \frac{\Delta P}{\Delta t} = \frac{0.2 - 0.85}{12:00 - 11:00} = -0.65 \text{ (-65%) ramp down of its normal capacity, (pu/hr)}$$

$$\text{Ramp rate, } \frac{\Delta P}{\Delta t} = \frac{0.48 - 0.1}{14:00 - 13:00} = +0.38 \text{ (+38%) ramp up of its normal capacity, (pu/hr)}$$

Some ramps are with low rates, while others with high rates.

Distribution of the classes of solar power ramp events

Ramp Events During a Cloudy Day

# Research

There are several applications of power systems that rely on solar power ramp event forecasts

Distribution level:

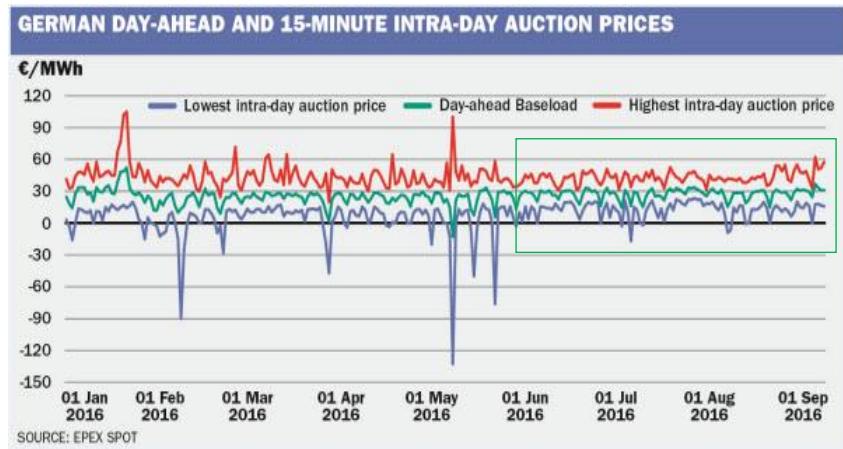

- Optimizing the voltage regulation equipment.
- Control schemes of energy storage systems.

Optimizing the Transformer's Tap Changer position sequences using the solar forecast

Transmission / bulk level:

- Trading & dispatching the operating reserve.
- Managing the ramp capability / system flexibility with high-level of renewable energy integration.

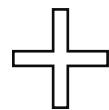

EPEX: European power exchange spot trading

# Research

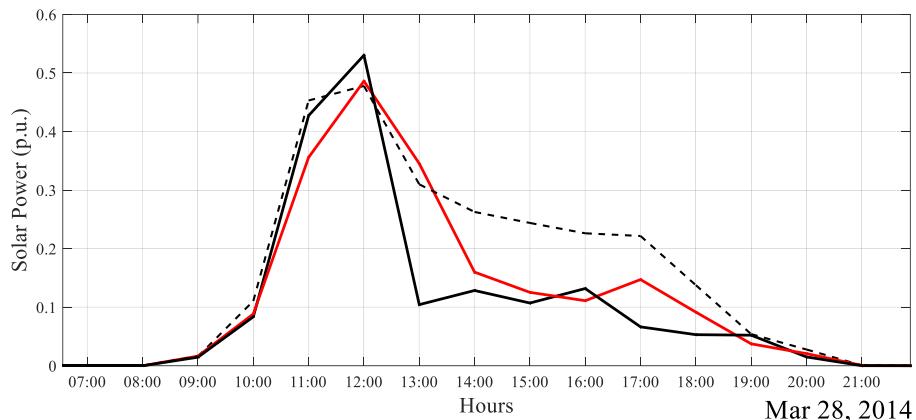

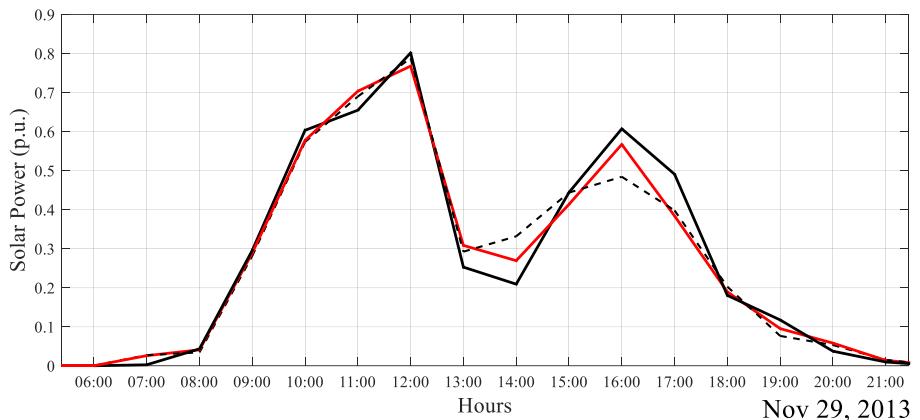

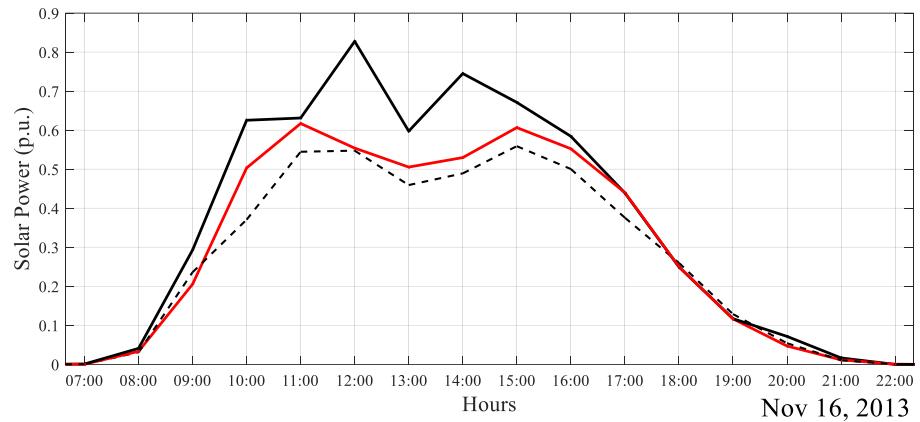

Flowchart of Solar Power Forecasts

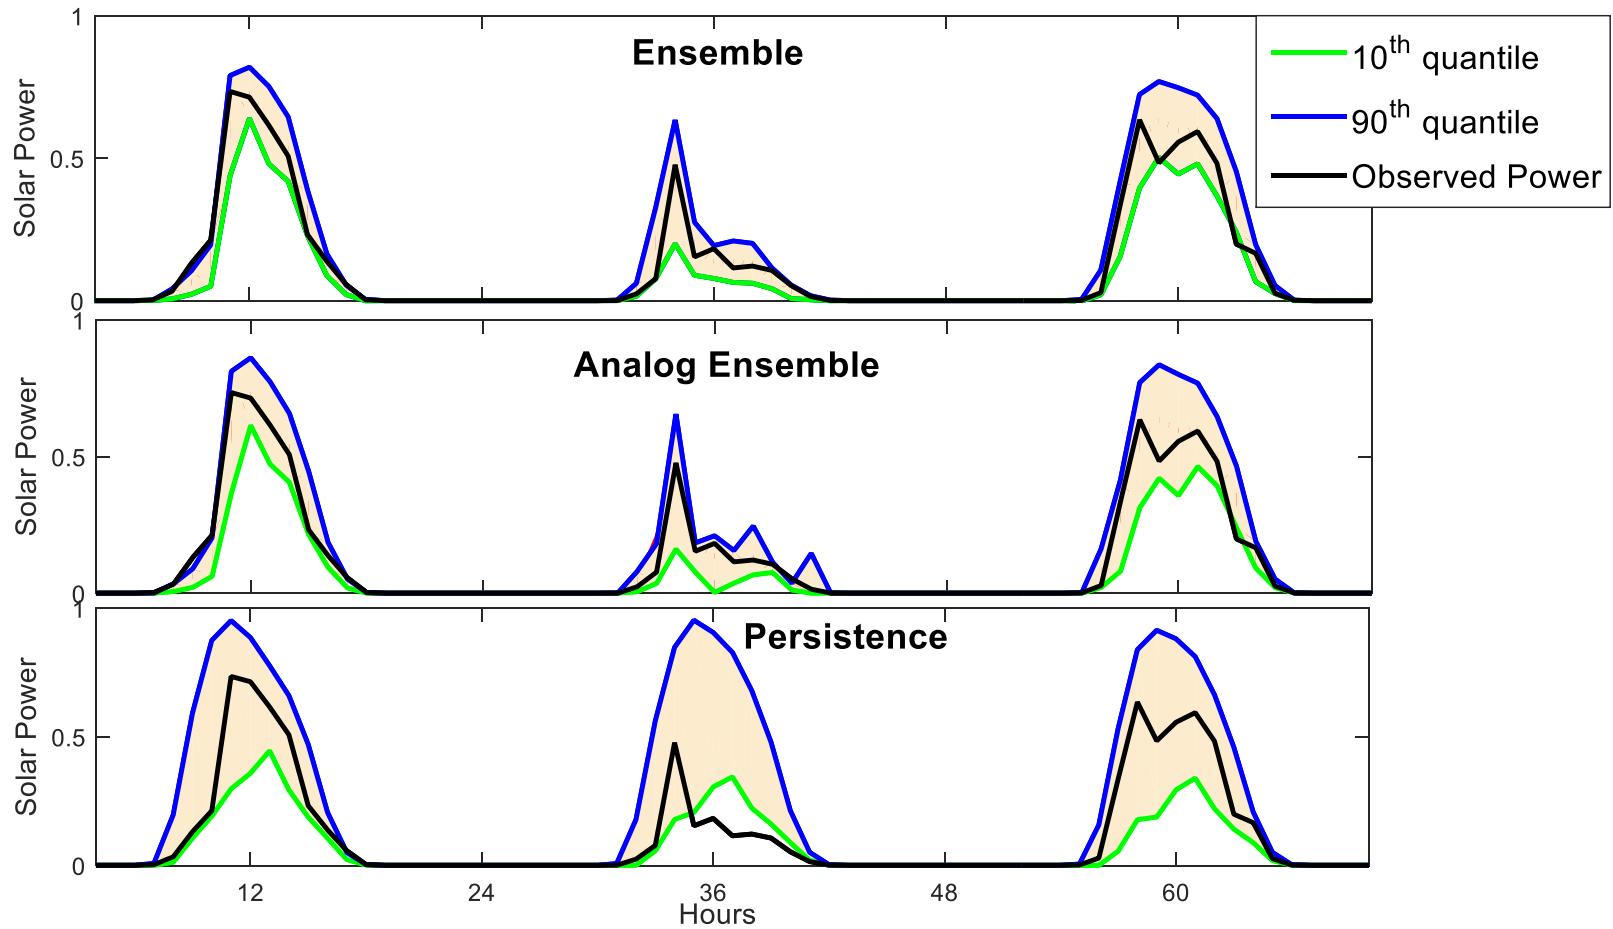

Block diagram of the adjusting approach

# Research

Combined forecasts of solar power for cloudy days before and after applying the adjusting

# Research

Graphs of the probabilistic forecasts of the three methods for three days

# Research

Improvement of Adjusted Ensemble-based Probabilistic Forecasts Over:

$$Skill\ Score\ (\%) = \left( 1 - \frac{Metric_{method}}{Metric_{reference}} \right) * 100$$

**Average Improvement of the Adjusting Approach:**  
**51%** over Persistence;  
**16%** over Analog Ensemble;  
**15%** over Ensemble.

## Planning and Analysis for Solar Energy in Libya

9 Locations for Comparison of Solar Energy Modeling and Analysis: Tripoli, Misurata, Sirte, Benghazi, Derna, Houn, Gadamis, Sebha, Kufra  
 Typical Meteorological Year (TMY) data represents the weather for a "median year". <https://developer.nrel.gov/>

Solar Energy Modeling

Capacity Factor of Solar Energy Resources

Variability of Solar Energy Resources

Aggregation of Solar Energy Resources

The Capacity Factor is calculated based on output power (PWac).  
 The Rating of Solar PV System = 1000W during an entire year = 8760 hours.

# Research

## Planning and Analysis for Wind Energy in Libya

17 Locs: Tripoli, Misurata, Tarhunah, Ghanima, Msallata, Zuwara, Gharyan, Sirte, Benghazi, Magrun, Derna, Houn, Gadamis, Sabha, Kufra, Tobruk, Jaghbub

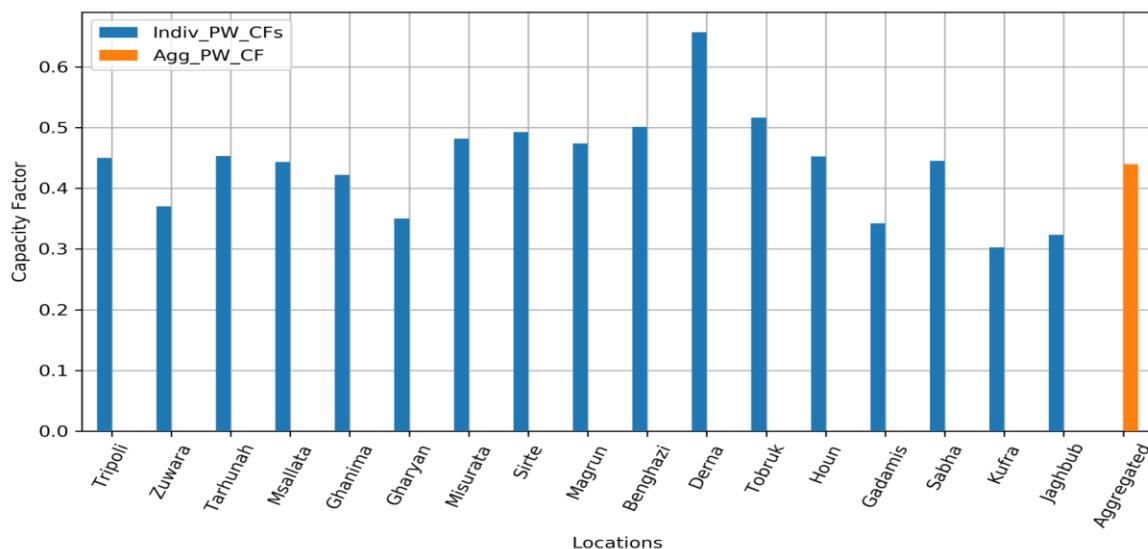

Typical Meteorological Year (TMY) data represents the weather for a "median year". Data are retrieved from NREL's Developer Network:  
<https://developer.nrel.gov/> Comparison of Monthly Average Wind Speed (m/s) at Height of 10m

The Capacity Factor is calculated based on Output power (PWac).

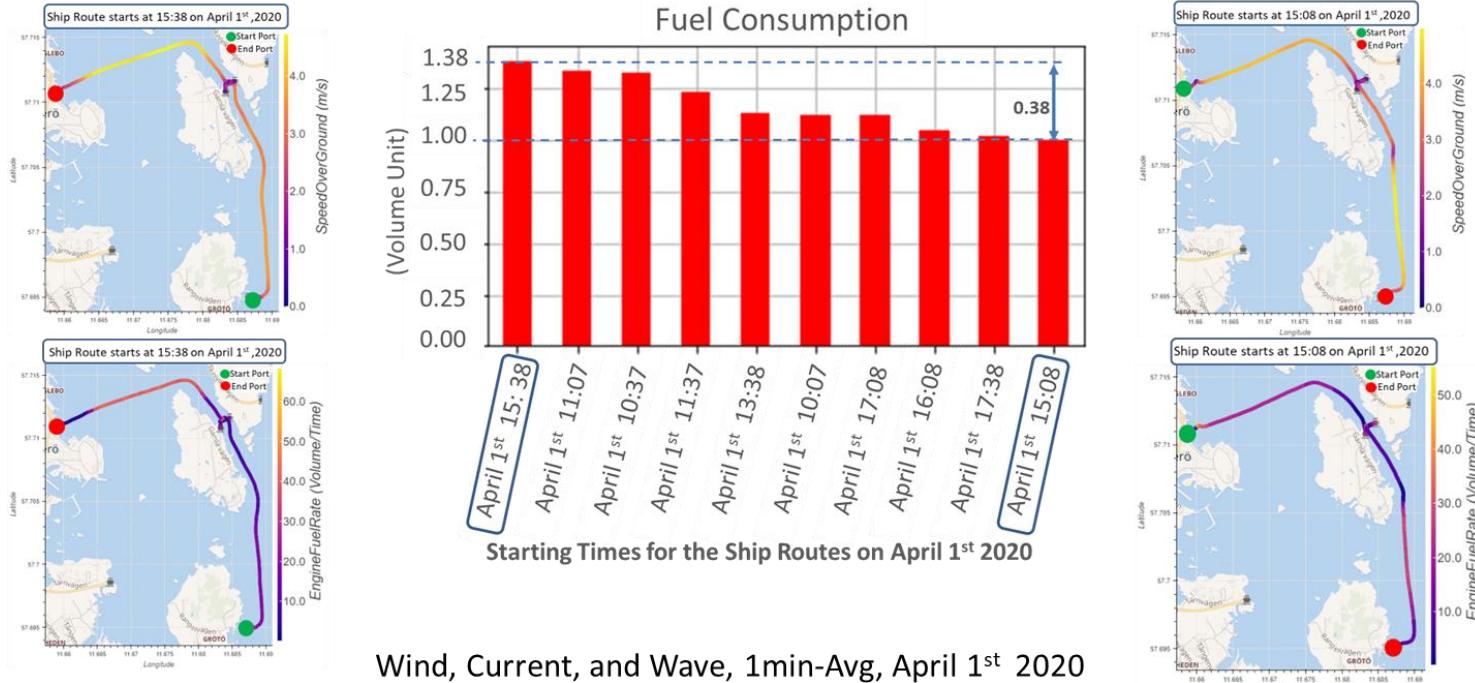

The Rating of Solar PV System =1000W during an entire year = 8760 hours.

Berlin in Germany has been added just for sake of comparison.

## Research Work for Improving the Vessel's Energy Efficiency

Wind, Current, and Wave, 1min-Avg, April 1<sup>st</sup> 2020

# Research

## Data Analytics for Improving the Vessel's Energy Efficiency

### Descriptive Modeling

Input: Data of vessel's operational and environmental data, from onboard and external sources.

Outcome: Dataset for training and validation the predictive and prescriptive models.

### Predictive Modeling

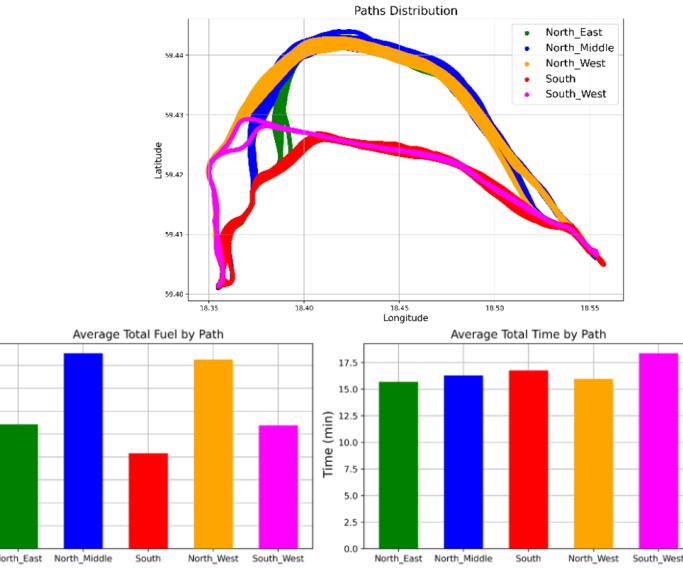

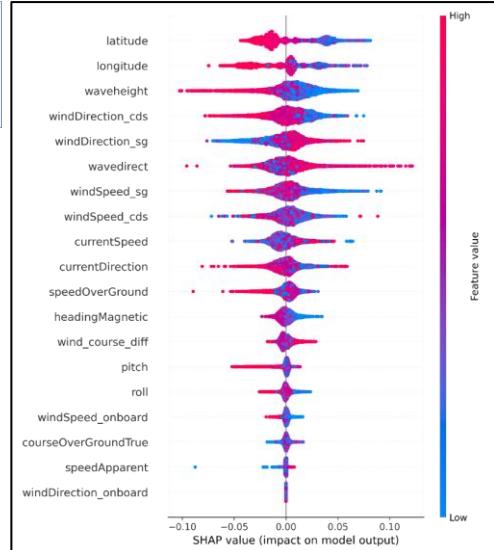

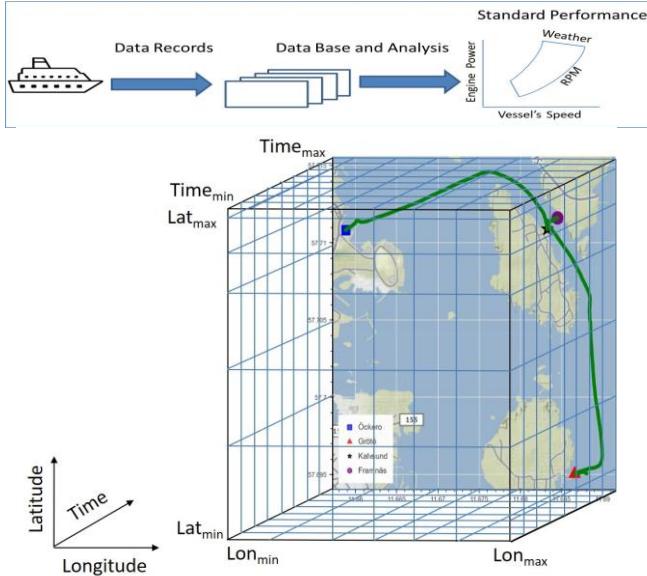

Input: Preprocessed data include operating and weather variables, such as vessel's speed and course, wind, wave, current, etc.

Outcome: Validated predictive models for fuel, distance and time.

### Prescriptive Modeling

Input: Using solving algorithms, with control variables, such as vessel's speed and course, to find the optimal fuel and time.

Outcome: Improving fuel consumption and meeting the operational conditions

# Research

## Workflow of Applying XAI for Improving the Vessel's Energy Efficiency

**Shapely values for Regression of Eff-Score** (Global, where Fuel and Time are normalized based on values of all routes)

The spatio-temporal aggregation and using the efficiency score (Global) leads to the **causality**

## Efficiency Score

*It is calculated once for the entire route.*

1754 sequences (Routes)

$$Eff_{Cost} = \frac{2 * (Fuel\ Total_{norm} * Time\ Total_{norm})}{(Fuel\ Total_{norm} + Time\ Total_{norm})}$$

$$Eff_{score} = 1 - Eff_{Cost}$$

## Research

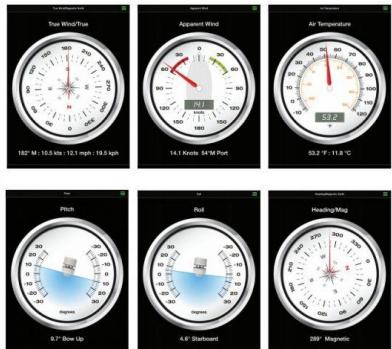

## Predictive Analytics

# Research

## Problem Formulation

*Objective Function:*  
Minimizing the fuel consumption

## Solutions Finding

*Solving algorithm:*

Modeling and managing the engine power at any weather conditions by using a fuel estimation model

*Control variables:*  
Ship's speed and course

*Constraints:*

Arrival time, geographic, safety, route smoothness, the ship's roll, and the engine power

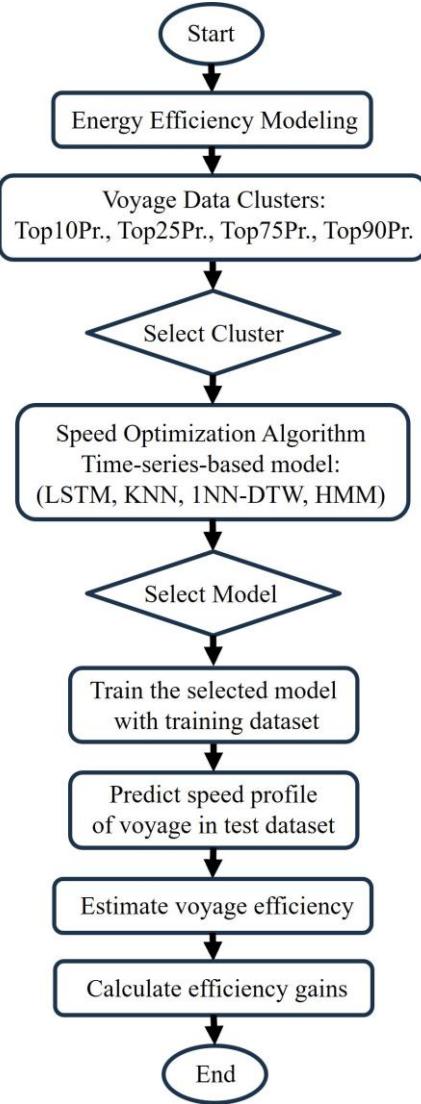

*Objective:*  
Minimum fuel consumption
